Message

Indian agriculture has overcome several challenges in the past and achieved phenomenal success ensuring self-sufficiency in food production. The technologies generated within the National Agricultural Research System (NARS) have significantly contributed to the transformation of Indian agriculture and ushering Rainbow Revolution representing Green, White, Golden, Brown and Blue revolutions defining outstanding technology-led performance in foodgrain, milk, oilseeds and pulses, horticulture and fisheries sectors. Agriculture along with other primary sectors is a major source of strength for the Indian economy. However, burgeoning population, increasing demand for food, feed and fodder, decreasing land availability, natural resource degradation, decreasing factor productivity, climate change, slow growth in farm income and new global trade regulations have put new challenges threatening food, nutritional and livelihood security.

Technological interventions by the NARS have led to spectacular accomplishments relating to input use efficiency, climate resilience, mechanization and secondary agriculture leading to economic transformation. These coupled with the application of information and communication technology will play a critical role in our future endeavours to accelerate agricultural growth in the country. I am glad that the Subject Matter Divisions of Indian Council of Agricultural Research (ICAR) have synthesized and compiled practical and useful technologies in this series of publications on Agricultural Technologies in a user-friendly mode. I am sure this information will be useful to farming community, extension agencies, entrepreneurs and agro-industries in their efforts to make Indian agriculture economically viable and ecologically secure.

January 2014
New Delhi

(Sharad Pawar)

Foreword

Agriculture is the corner-stone of Indian economy. About 70% of India's 1.27 billion population live in rural areas with small and marginal land holdings. India with a geographical area of over 328 million hectares is endowed with diversity of climate, soils and vegetation. This rich resource endowment is, however, threatened with ever increasing population, vagaries of nature and climate change. The National Agricultural Research System (NARS) comprising the Indian Council of Agricultural Research (ICAR), 55 State Agricultural Universities, five Deemed Universities, four Central Universities with agriculture faculty, one Central Agricultural University and 637 Krishi Vigyan Kendras have attained excellence in several frontier areas of agricultural sciences and technology contributing significantly towards the spectacular growth of Indian agriculture during past 60 years.

Initiatives by NARS in the country have led to notable accomplishments resulting in the socio-economic transformation of farmers. The agriculture sector is, however, witnessing radical changes and challenges both at national and global level. The emerging challenges and opportunities necessitate wider and faster adoption of the improved technologies by all the stakeholders right from production to consumption in a food chain. In an effort to achieve this, the divisions of crop science, horticulture, animal science, natural resources management, fisheries and agricultural engineering in the ICAR have compiled the technologies already commercialized and the technologies ready for commercialization. This series of publications, brings out the salient features of the technologies with details on potential users and contact details of the developers for ready and easy access. It will be our endeavour to periodically update this Technology Series. I hope that this publication would be useful to the farming community, extension agencies, entrepreneurs and industry. I greatly appreciate the efforts put in by my colleagues in the Council, research institutes and State Agricultural Universities (SAUs) in bringing out this compilation.

(S Ayyappan)

Secretary,

Department of Agricultural Research and Education, and

Director General

New Delhi

Preface

The agricultural engineering division of ICAR is primarily involved in the areas of farm mechanization, precision farming, energy in agriculture, post-harvest management and value addition of agricultural, livestock and aquatic produce. The technologies developed by the institutes and the AICRPs are disseminated to the stakeholders through various channels. Transfer of technology to the farmers and the entrepreneurs has always remained a challenge. Engineering interventions in agriculture have become imperative to improve productivity, reduce the cost of production and drudgery, and improve livelihood opportunities. Farm mechanization for timeliness of operations, precision farming for improved input use efficiency, processing technologies for value addition and reduction in post-harvest losses, conservation of natural resources and energy management are the core areas. Technologies have been developed and commercialized in these areas.

Over the years, the network of institutions have been strengthened, but it still cannot reach the vast majority of stakeholders. The Engineering Division of ICAR has compiled two publications in the form of compendium of “Agricultural Engineering Technologies – Commercialised” and “Agricultural Engineering Technologies – Ready for Commercialisation”. The publications have been subdivided into sections on Seed Bed Preparation, Seeding and Planting, weeding and Plant Protection, Harvesting, Threshing, Post-Harvest Equipment, Value-Added Products, Irrigation and Renewable Energy and Miscellaneous Technologies to easily locate the relevant technologies. The salient features, performance results, cost (the cost is indicative depending on the place and year of development) impact and benefits, address of manufacturers and the institute where it has been developed have been included for each technology. I am confident that this publication will be useful to all the stakeholders involved in agriculture including extension personnel and entrepreneurs. I appreciate the efforts put in by my colleagues Dr K K Singh, ADG (PE), Dr K K Singh ADG (Engg.), Dr S Genesan, Dr Devinder Dhingra, Dr K P Singh, Dr K N Aggarwal, Dr Nilesh Gaikwad and Ms Monika Sharma in compilation of this document.

<i>Message</i>	<i>iii</i>
<i>Foreword</i>	<i>v</i>
<i>Preface</i>	<i>vii</i>
I. Farm Machinery	
Seed Bed Preparation	
Animal Drawn Stubble Collector	1
Engine Operated Portable Post-Hole Digger	2
Power Operated Nursery Media Filling Machine	3
Tractor Operated Plastic Mulch Laying Machine	4
Seeding and Planting Machinery	
Animal Drawn Zero Till Seed-cum-Fertilizer Drill	5
Animal Drawn Potato Planter	6
Animal Drawn Single-Row Inclined Plate Planter	7
Pneumatic Operated Sugarcane Bud Chipper	8
Power Operated Seed Pelletizing machine	9
Tractor Operated Seed Drill for Sowing on Furrow Slants	10
Tractor Operated Two-row Vegetable Transplanter	11
Tractor Operated Sugarcane Bud-chip Settling Planter	12
Tractor Operated Berseem Seed Drill	13
Tractor Operated Mixed Cropping Enabled Zero-till Drill	14
Weeding, Interculture and Plant Protection Machinery	
Manually Operated Herbicide Applicator	15
Manually Operated Nail Weeder	16
Women Friendly Cono Weeder	17
Bullock Drawn Plant Thinning Device	18
Bullock Drawn Engine Operated Sprayer for Cotton and Pigeonpea	19
Telescopic Sprayer for Palms	20
Tractor Operated Aero-Blast Orchard Sprayer	21
Harvesting Machinery	
Arecanut Tree Climber and Harvesting Knife	22
Guava Fruit Harvesting Kit	23
Women Friendly Scissor Type Tea Plucker	24
Tractor Drawn Groundnut Digger-cum-Shaker	25
Tractor Drawn Groundnut Pod Exposer	26
Tractor Mounted Root Crop Harvester-cum-Elevator	27
Tractor Mounted Turmeric Harvester	28
Tractor Operated Groundnut Digger Elevator	29

Tractor Operated Plant Puller for Cotton, Castor and Pigeonpea	30
Tractor Operated Potato Digger	31
Tractor Operated Potato Haulm Cutter	32
Threshing Machinery	
Women Friendly Arecanut Dehusker	33
Women Friendly Groundnut Stripper	34
Arecanut Stripper	35
Brinjal Seed Extractor	36
Chilli Seed Extractor	37
Pusa Basmati Rice Thresher	38
Thresher-cum-Ammonia Treatment Machine	39
Tomato Seed Extractor	40
Tractor/Electric Motor Operated Multi Crop Thresher for Seed Spices	41
Power Operated Pigeonpea Stripper	42
II. Post-Harvest Machinery	
<i>Aonla</i> Processing Pilot Plant	43
Power Operated Litchi Peeler	44
Hand Operated Emery Disk Horizontal Mill (<i>Chakki</i>)	45
Hand Operated Low Cost <i>aloe-vera</i> Gel Extractor	46
Hand Operated Rubber–Steel Vertical Mill (<i>Chakkī</i>)	47
<i>Aonla</i> Pricking Machine	48
Apricot Grader	49
Apricot Decorticator	50
Bamboo Slicer-cum-Incense Stick Maker	51
Coconut Slicing Machine	52
Double Screen Cleaner	53
Fibre Reinforced Plastic Demand Fish Feeder	54
Bamboo Stick Making Machine	55
Radial Arm Type Cashew Kernel Extraction Machine	56
Tender Coconut Punch and Cutter	57
Winnower-cum-Cleaner Grader	58
Manually Operated Onion Grader	59
Pedal-cum-Power Operated Ice Crusher	60
Pedal Operated Ash Gourd (<i>petha</i>) Pricking Machine	61
Pedal Operated Potato Peeler	62
Pedal Operated Potato Slicer	63
Pedal Operated Spinning Wheel (<i>Charkha</i>)	64
Power Operated Onion Grader	65
Multi-Purpose Tray Dryer	66
<i>Aonla</i> Segmentation and Seed Removal Equipment	67
<i>Aonla</i> Shredding-cum-Stone Extracting Machine	68
Axial Flow Cotton Pre-Cleaner	69
Cleaner/Grader for Small Seeds	70
Coconut De-Shelling Machine	71

Coconut Testa Removing Machine	72
Continuous Feed Type <i>Aloe vera</i> Gel Extractor	73
Continuous <i>Khoa</i> Making Machine	74
Curry Leaf Stripper	75
Defibering Machine for Coconut Husk	76
Dehumidified Air Dryer	77
Drum Roasting Machine for Raw Cashewnuts	78
Dual mode Convective Dryer for Raw Cashewnut	79
Endless Screen Type Potato Grader	80
Fish De-Boner	81
Fish Descaling Machine	82
Forced Flow Dryer for Curry Leaf	83
French Fry Cuts Making Machine	84
Power Operated Fruit Grader	85
Grain Flour Separator	86
Power Operated Grain Pearler	87
Guar Seed Dehulling Machine	88
Hydraulic Type Cashew Apple Juice Extractor	89
Power Operated Millet Mill	90
Power Operated Minicard for Sliver Production	91
Multi-Sheath Feeder to Raspador Fibre Extraction	92
Onion Seed Extractor	93
Rotary Sieve Grader for Raw Cashewnuts	94
Snow Ball Tender Nut Machine	95
Power Operated Stone Apple Slicer	96
Power Operated Suction Winnowing	97
Tray Dryer	98
Power Operated Worm Sieving Machine	99
Pulse Mill Plant	100
Roughage Block Making Machine	101
Vegetable Dryer	102
Low Cost Fish Descaling Hand Tool	103
Fish Processing Table-cum-Retail Sales Unit	104
Poultry Processing Table	105
III. Post-Harvest Processes and Products	
Instant Corn Dessert Mix	106
Corn Energy Bar	107
Gum Inducing Technology for Production of Gum-Arabic from <i>Acacia senegal</i>	108
Camel Milk <i>Kulfi</i>	109
Flavoured Camel Milk	110
Value Added Product from Camel Milk	111
Camel Milk Cheese	112
Value Added Products from <i>Aloe vera</i>	113-114
Value Added Goat Milk Products	115
Supplement Feed Blocks for Livestock	116
Safe Storage of Pulses using Sand Layer	117

IV. Renewable Energy Gadgets	
Biomass Fired Batch Type Grain Dryer	118
Agriculture Wastes Fired Dryer for Red Chillies	119
Cabinet Type Solar De-Hydrator	120
Indirect Solar Dryer	121
Non-Tracking Solar Cooker	122
Solar Dryer for Vegetables and Fruits	123
Solar Tunnel Dryer	124
Parabolic Solar Concentrator for Milk Pasteurization	125
High Rate Digester for Agro-Industrial Effluent	126
Biphasic Biomethanation System for Fruit and Vegetable Market Waste	127
Biomass Combustor-cum-Hot Air Generator	128
Open Core Downdraft Gasifier	129
Poly House Type Fish Drying System	130
Natural Convection Solar Dryer	131
Fibre Reinforced Plastic Automatic Fish Feeder	132
V. Miscellaneous Machinery	
Manual Drip Lateral Coiler	133
Palmyrah Tree Climbing Device	134
Safety Attachment to Coconut Climber	135
Tractor Drawn Multi-Utility Elevator Platform	136
Cotton Seed Blower	137
Disintegrator Machine	138
Mole Plough for Pipeless Drainage in Vertisols	139
Technology for Agricultural Drainage in Vertisols	140
Anti-vibration Device for Increased Comfort of Power Tiller Operator	141
Anti-vibration Devices for Increased Comfort of Tractor Operators	142
Tractor Operated Pumping Device for Removing Poisonous Gas from Wells	143

Animal Drawn Stubble Collector

Salient features

- Stubble collector consists of a frame, collecting rake, handle, hitch and beam.
 - It is used for collecting stubbles, weed residue and crop residues in harvested fields.
 - The main component is the rake which consists of curved mild steel rods.
- The bars are sharpened and curved up to a height of 75 mm from bottom.
 - During stubble collection, the implement also breaks soil clods.
 - Overall dimensions (w×h) : 1,650×360 mm
 - Weight : 33 kg

Performance

- Depth of operation : 55-60 mm
- Forward speed : 2.95 km/h
- Field capacity : 0.42 ha/h
- Draft : 500-600 N

Cost

- Unit cost : ₹ 2,500
- Cost of operation : ₹ 350 /ha

Impact and benefits

- There is 80% saving in cost of operation using this implement.

E-mail: smitasolanki@yahoo.com

Engine Operated Portable Post-Hole Digger

Salient features

- Helix : Partially double, Diameter : 150 mm-Thickness: 5 mm
- Cutting edge length :70 mm, Width : 4 mm, Thickness: 10 mm
- Power transmission system: Gear system with 11:1 speed ratio (110-160 rev/min)
- It consists of 3.73 kW diesel engine, mounted on 4 wheel trolley.

Performance

- This machine makes about 25 to 35 pits of 150 mm diameter and 450 mm depth per hour.

Cost

- Unit cost : ₹ 60,000
- Cost of operation : ₹ 10/pit

Impact and benefits

- This machine is useful for creating pits on uneven field or forest area users.
- Socio-economic conditions of farmers can be strengthened by portable post-hole digger.

Power Operated Nursery Media Filling Machine

Salient features

- The unit consists of 2.2 kW motor, feed hopper, paddles, sieving tray and electronic vending.
- Electronic vending is the novel system adopted in this machine, which is used for filling the nursery media mixture at set quantity (250 g, 500 g, 1,000 g, etc.).
- Accuracy of the system is more than 90%, which is the acceptable level in nursery practices.
- Two women operators are required, and both the operators can safely and comfortably work with the machine in standing and sitting position.

Performance

- Capacity : 100 kg /h

Cost

- Unit cost : ₹ 1,00,000

Impact and benefits

- Saving in cost and time over conventional method are 71.4% and 80.2% respectively.
- Reduction in drudgery of operation as compared to manual method.

Tractor Operated Plastic Mulch Laying Machine

Salient features

- The equipment consists of concave discs of 400 mm diameter for making bunds or raised beds.
- Pneumatic press wheels of 350 mm diameter for pressing the edges of plastic film to the ground.

- Overall dimensions (l×w×h) : 1,850×2,600×1,550 mm
- Weight : 400 kg
- Length of roll holder : 1,950 mm
- Diameter of roll holders : 75 mm
- Diameter of concave disc : 400 mm
- Speed of operation : 0.39-0.49 m/s

Performance

- Field efficiency : 55.4-62.5 %
- Field capacity : 0.12 – 0.18 ha/h

Cost

- Unit cost : ₹ 55,000
- Cost of operation : ₹ 2,000-2,200/ha
- Labour requirement : 15 man-h/ha

Impact and benefits

- Saves 41% water and 71% labour in weeding over raised beds.
- About 30 % higher yield in raised beds with plastic mulch over bare raised beds.
- User can earn benefit of ₹ 21,000/ha.

Animal Drawn Zero Till Seed-cum-Fertilizer Drill

Salient features

- It is available in 3 sizes (1/2/3 rows) and may be selected depending on pulling capacity of work animals.
- It consists of inverted ‘T’ type furrow openers.
- Weight of the machine is 40-60 kg and draft requirements vary between 400 and 600 N.

Performance

- Field capacity : 0.02-0.06 ha/h

Cost

- Unit cost : ₹ 3,000- 4,000
- Cost of operation : ₹ 700-1,800/ha

Impact and benefits

- Saving in cost of operation by ₹ 1,200-2,300/ha.
- Saving of time 60-85 h/ha.
- Increased yield by 4-5% because of timeliness in seeding.
- Owing to minimum disturbance of soil in zero tillage, this implement will be able to prevent soil erosion, a major problem in hill region.

Animal Drawn Potato Planter

Salient features

- Type : Single row, animal drawn, automatic metering
- Dimension (l×w×h) : 1,550×1,100×1,150 mm
- Weight : 110 kg
- Tuber to tuber spacing : Adjustable (160 to 300 mm)
- Metering mechanism : Picker wheel

Performance

- Field capacity : 0.9 ha/day
- Tuber missing : Negligible
- Tuber damage : Less than 0.5%
- Power requirement : A pair of bullocks
- Labour requirement : One person

Cost

- Unit cost : ₹ 9,000

Impact and benefits

- Increased work output.
- Uniform row to row and plant to plant spacing.
- Saving in time and labour.
- The developed prototype shall promote the use of animals in potato cultivation for small and marginal farmers.

Animal drawn Single-row Inclined Plate Planter

Salient features

- Suitable for sowing of crops like groundnut, maize, pigeonpea, mustard, gram and soybean.
- The planter is provided with a seed box with inclined plate type seed metering mechanism.
- Shoe type furrow opener ensures low draft requirement of the machine.
- Seed plates can easily be changed for sowing different crops.

Performance

- Field efficiency : 80-85%
- Field capacity : 0.05-0.1 ha/h

Cost

- Cost : ₹ 2,500
- Cost of operation : ₹ 800-1,000/ha

Impact and benefits

- Use of planter would result in saving of seed up to 20%.
- Use of planter would also result in increase in productivity up to 20% due to uniform and accurate placement of seeds.
- Reduced time of operation and drudgery.

Pneumatic Operated Sugarcane Bud Chipper

Salient features

- It consists of frame, bud chipper to chip the buds and an air compressor with a pneumatic cylinder.
- The blade is attached to a stainless steel cylindrical shaft, which is operated by pneumatic cylinder.
- The pressure required to chip the buds varies from 0.60 to 0.70 MPa.

Performance

- Capacity : 1,000 bud chips/h

Cost

- Unit cost : ₹ 30,000

Impact and benefits

- Removing of sugarcane bud chip from sugarcane for planting in nursery.
- The excess sugarcane can be taken to factory for juice extraction.
- Easy storage and transportation of sugarcane bud chips.

Power Operated Seed Pelletizing Machine

Salient features

- Overall dimensions (l×w×h) : 1,400×1,000×600 mm
- Electric power : 3 kW, single phase motor
- Manpower : 1 person
- It consists of hemispherical coating pan rotated in an inclined plane with the help of motor and gear box.
- Cleaned and graded seed fed to the pan, rotation on inside surface of the pan and coating slurry is sprayed intermittently on to the seed by hand pump, drying them simultaneously by hot air supplied through a blower.

Performance

- Capacity : 250-500 g/batch/three hour
- Size of pellets : 3 to 5 mm diameter (as per requirement)

Cost

- Unit cost : ₹ 85,000

Impact and benefits

- Maintains the quality of seeds.
- Various treatments to seeds can be done.
- It may be helpful in reducing the germination period of seeds and increase germination percentage.

Tractor Operated Seed Drill for Sowing on Furrow Slants

Salient features

- A tractor operated three furrows, multi-crop seed-cum-fertilizer drill with a seed pressing device.
- Specifically designed for seeds to be sown on the slant surfaces of the furrow.

Cost

- Unit cost : ₹ 35,000-40,000

Impact and benefits

- Prevents crust formation.
- Increase in crop production (30-70%).
- Deep and wide furrows created help in moisture retention and check soil erosion.
- Facilitates application of drip irrigation system more conveniently and effectively.
