## **FOREWORD**

Increase in agricultural production is one of the main objectives of our agricultural planning. It is only by the exploitation of scientific methods of agriculture that we can hope to increase our agricultural production to the level needed for maintaining a reasonable standard of living to the country's population. The technical worth of improvement measures is best judged from carefully conducted field experiments. While it is true that a large number of agricultural field experiments are conducted in the country, the results of these experiments have not been brought together in an integrated manner for the use of research workers. The absence of such a unified account has often led to duplication of work and delay in the utilisation of results for practical farming. The Institute of Agricultural Research Statistics has rendered a very valuable service by preparing a compendium of agricultural field experiments conducted in the country. The first series of compendium containing the results of all agricultural field experiments during the period 1948-53 have already been published by the Institutue.

The present compendium is the second in the series covering the period 1954-59. As in the earlier compendium, the present series also contains critical summaries of results of experiments bearing on important agronomic factors, such as the response of crops to fertilizers and manures, inter-relationship of fertilizers, varieties and cultivation practices and other information of value for giving sound advice to farmers in different regions. Judging from the demand for the first series of the compendium, I am sure that the present series will also prove equally useful.

A Standing Committee consisting of the Agricultural Commissioner with the Government of India, the Director, Indian Agricultural Research Institute, and the Statistical Adviser, Indian Council of Agricultural Research, has been set up to provide general guidance to the work under this scheme. I congratulate the members of this Committee and, in particular, the Statistical Adviser and his associates at the Institute of Agricultural Research Statistics for bringing out this compendium. The preparation of this compendium has been made possible only by the wholehearted co-operation of the States and other organisations in making available the results of their experimental researches for this purpose. My thanks are due to the officers of the State Departments of Agriculture and other institutions for participating in this work. I hope that the present series will be followed by periodical publications of similar compendia for later years, in order that the availability, in a consolidated form, of results of scientific experiments in agriculture in India may be maintained up-to-date.

**A. D. PANDIT**

*Vice-President,*

NEW DELHI,

March 26, 1965.

## PREFACE

The present set of volumes form Part II in the series of compendia of Agricultural Field Experiments being published by the Indian Council of Agricultural Research under the project for National Index of Field Experiments and contains a unified record of experiments conducted at agricultural research stations and institutes all over the country. Volumes in Part I in this series were published in 1962 and contained results of some 7,500 experiments conducted during the period 1948-53. The present set of volumes includes results of experiments conducted during the next period that is 1954-59. After the period, covered by Part I of the series, agricultural research and experimentation has expanded so much that for the period 1954-59, to which the present volumes refer, results of more than 15,000 experiments are available.

The present compendium is prepared on the same pattern as the previous one and is divided into 15 volumes one each for (1) Andhra Pradesh, (2) Assam, Manipur and Tripura, (3) Bihar, (4) Gujarat, (5) Kerala, (6) Madhya Pradesh, (7) Madras, (8) Maharashtra, (9) Mysore, (10) Orissa, (11) Punjab, Jammu and Kashmir and Himachal Pradesh, (12) Rajasthan, (13) Uttar Pradesh (14) West Bengal and (15) All Central Institutes. In each volume, background information of the respective state regarding its division into different soils and agro-climatic regions, rainfall and cropping pattern followed in each region and agricultural production and area under different crops in the state is given. The experiments reported in each volume have been arranged crop-wise for each state. All the experiments belonging to a particular crop at various research stations are grouped together. For a particular crop, experiments are arranged according to the following classification :

Manuriel (M), Cultural (C), Irrigational (I), Diseases, pests and chemicals other than fertilizers (D), Rotational (R), Mixed cropping (X) and combinations of these wherever they occur (e.g. CM as Cultural-cum-Manuriel). Experiments in which crop varieties also form a factor are denoted by adding V to their symbol and are grouped together (e.g. MV as Manuriel-cum-Varietal).

This publication owes its origin to the guidance and help of Dr. D.J. Finney, F.R.S., Professor of Statistics, Aberdeen University, Scotland, in formulating the project during his stay at the Institute of Agricultural Research Statistics as an F.A.O. expert in 1952-53.

At the Institute of Agricultural Research Statistics the work under the scheme was carried out under the supervision of Shri. T.P. Abraham, Assistant Statistical Adviser. The actual working of the scheme was conducted by Shri G.A. Kulkarni, Statistician till he left the Institute in July, 1964. The work was subsequently taken over by Shri O.P. Kathuria, Assistant Statistician. Messrs. L.B.S. Somayazulu, P.P. Rao, M.L. Sahni, Harbhajan Singh, A.L. Punhani, M.K. Joshi, N.K. Worrier, H.C. Jain and J.K. Kapoor of the statistical staff of the Institute deserve special mention for careful and painstaking work in editing and scrutiny of the manuscript as well as proofs of the compendium.

The burden of collecting the data from the various research stations and the analysis of a large number of experiments once again fell on the regional staff of the Council placed in different States. They deserve to be congratulated for the hard work they have put in.

Thanks are due to the State Departments of Agriculture, the Central Institutes and the Commodity Committees who made the data of the experiments conducted under their jurisdiction readily available to the staff of the Institute. The present publication has become possible only through their unstinted co-operation. The Institute is also thankful to the various

officers in the States who worked as Regional Supervisors for the project from time to time and took keen interest in the working of the Scheme. The list of the names of the regional supervisors and the regional staff of the project is given on the following page.

V.G. PANSE

SHRI V. RAMAN, Secretary, Research Council.  SHRI K.R. NAGARAJA RAO, Secretary, Research Council.
12. ASSAM	T.K. GUPTA	DR. S.R. BAROOHA, Director of Agriculture, Assam.  SHRI B.N. DUARA, Joint Director of Agriculture, Assam.
13. MYSORE (BANGALORE)	K.A. BALAKRISHNAN	SHRI M.A. WALI, Director of Statistics,  SHRI B.V.S. RAO, Assistant Director of Statistics.
14. KERALA (TRIVANDRUM)	V.N. IYER	SHRI M. JANARDANAN NAIR, Director of Agriculture.  SHRI N. SHANKARA MENON Director of Agriculture.  SHRI P.D. NAIR, Director of Agriculture.

## ABBREVIATIONS COMMON TO EXPERIMENTS ON ANNUAL AND PERENNIAL CROPS AND EXPERIMENTS ON CULTIVATORS' FIELDS.

**Crops :-** In the top left corner is given the name of the crop on which the experiment is conducted. Within brackets along side the crop is mentioned the season wherever the information is available.

**Ref :-** Against the sub-title 'reference' is mentioned the name of the State, the year in which the experiment is conducted and the serial number of the experiment for that year given in brackets.

Abbreviations adopted for States are as follows :—

- |                           |                        |
|---------------------------|------------------------|
| 1. A.P.—Andhra Pradesh    | 9. M.—Madras           |
| 2. As.—Assam              | 10. Mh.—Maharashtra    |
| 3. Bh.—Bihar              | 11. Ms.—Mysore         |
| 4. Gj.—Gujarat            | 12. Or.—Orissa         |
| 5. H.P.—Himachal Pradesh  | 13. Pb.—Punjab         |
| 6. J.K.—Jammu and Kashmir | 14. Rj.—Rajasthan      |
| 7. K.—Kerala              | 15. U.P.—Uttar Pradesh |
| 8. M.P.—Madhya Pradesh    | 16. W.B.—West Bengal   |

For the experiments conducted under the schemes sponsored by the Indian Council of Agricultural Research like the Model Agronomic Experiments or the Simple Fertilizer Trials scheme no serial numbers have been given at the source as the data of these experiments were collected at the Headquarters (New Delhi). In such cases the abbreviations MAE, SFT or TCM are given in the brackets against the year in which the experiment is conducted.

**Site :-**—Name of the Research Station is mentioned alongwith the place where it is located, e.g. Agri. Res. Stn. for Agricultural Research Station.

For Central Institutes, the corresponding standard abbreviations have been adopted e.g. I.A.R.I. for the Indian Agricultural Research Institute.

In case of the experiments conducted on cultivators' fields whether under an Indian Council of Agricultural Research scheme or by the State Government, the abbreviation (c.f.) is given along with the site or centre as, for example, Cuttack (c.f.).

**Type :-** Abbreviations used against this item are one or more than one of the following :—

C—Cultural ; D—Control of Diseases and Pests ; I—Irrigational ; M—Manurial ; R—Rotational ; V—Varietal and X—Mixed cropping. e.g. CM is to be read as Cultural-cum-manurial.

**Object :-** A statement of the objective of the experiment is given indicating the main crop and type of the experiment. In case of M.A.E., S.F.T. and T.C.M. experiments, the type to which the experiment corresponds is also given, e.g. Type V, Type A or B or C etc.

**Results :-** Information under this heading should be read against the following items :—

(i) General mean. (ii) S.E. per plot. (iii) Results of test of significance. (v) Summary table(s) with S.E. of comparison(s).

Other abbreviations used in the text of experiments :

Nitro. Phos.—Nitrogen Phosphate	A/N—Ammonium Nitrate
Ammo. Phos.—Ammonium Phosphate	A/C—Ammonium Chloride
A/S—Ammonium Sulphate	C/N—Chilean Nitrate
A/S/N.—Ammonium Sulphate Nitrate	N—Nitrogen
C/A/N—Calcium Ammonium Nitrate	P—Phosphate

K—Potash	F.M.—Fish Manure
B.M.—Bone meal	G.N.C.—Groundnut cake
Mur. Pot.—Muriate of Potash	M.C.—Municipal Compost
Pot. Sul.—Potassium Sulphate	T.C.—Town Compost
Super—Super Phosphate	lb.—Pounds
Zn. Sul.—Zinc Sulphate	Srs.—Seers
C/S—Copper Sulphate	B.D.—Basal dressing
G.M.—Green Manure	C.L.—Cart load
F.Y.M.—Farm Yard Manure	ac.—Acre
F.W.C.—Farm Waste Compost	Dical. Phos.—Dicalcium Phosphate

Under the item (ii) (b) of the sub-heading 'Basal conditions' in the text of the experiment, the respective farm/station at which the experiment was conducted has been referred to for the soil analysis. The soil analysis of the farm, with other details of the research station is given under the background information of each state. The information regarding the details of experimental stations may be obtained under the respective items as given below :

#### DETAILS OF EXPERIMENTAL STATIONS

**A. General information :**

- (i) District and the nearest railway station with Latitude, Longitude and Altitude if available. General topography of the experimental area.
- (ii) Type of tract it represents.
- (iii) Year of establishment.
- (iv) Cropping pattern.
- (v) Programme of research.

**B. Normal rainfall :**

Average monthly rainfall specifying the period on which the figures are based.

**C. Irrigation and drainage facilities :**

- (i) (a) Whether available, if so, since when.
- (b) Type of facilities available.
- (ii) Whether there is a proper drainage system.

**D. Soil type and soil analysis :**

- (i) Broad soil type with depth, colour, and structure etc.
- (ii) Chemical analysis.
- (iii) Mechanical analysis.

**E. No. of experiments :**

No. of experiments conducted on different crops that have been included in the compendium.

Information under the following heads is to be read against the respective items as given below.

#### BASAL CONDITIONS

**A. For experiments on annual crops :**

- (i) (a) Crop rotation if any.
- (b) Previous crop.
- (c) Manuring of previous crop. (State amount and kind).
- (ii) (a) Soil type.
- (b) Soil analysis.
- (iii) Date of sowing/planting.
- (iv) Cultural practices.
- (a) Preparatory cultivation.
- (b) Method of sowing/planting.
- (c) Seed-rate.
- (d) Spacing.
- (e) No. of seedlings per hole.
- (v) Basal manuring with time and method of application.
- (vi) Variety.
- (vii) Irrigated or Unirrigated.
- (viii) Post-sowing/planting cultural operations.
- (ix) Rainfall during crop season
- (x) Date of harvest.

**B. For experiments on perennial crops :**

- (i) History of site including manuring and other operations.
- (ii) (a) Soil type.
- (b) Soil analysis.
- (iii) Method of propagation of plants.
- (iv) Variety.
- (v) Date and method of sowing/planting.
- (vi) Age of seedlings at the time of planting.
- (vii) Basal dressing with time and method of application.
- (viii) Cultural operations during the year.
- (ix) Inter cropping if any.
- (x) Irrigated or Unirrigated.
- (xi) Rainfall during crop season.
- (xii) Date of harvest.

**C. For experiments on cultivators' fields :**

- (i) (a) Crop rotation, if any. (b) Previous crop. (c) Manuring of previous crop. (ii) Soil type in general. (iii) Basal manuring with time and method of application. (iv) Variety. (v) Cultural practices. (a) Preparatory cultivation. (b) Method of sowing. (c) Seed-rate. (d) Spacing. (e) No. of seedlings per hole. (vi) Period of sowing/planting. (vii) Irrigated or Unirrigated. (viii) Post-sowing/planting cultural operations. (ix) Rainfall during crop season. (x) Period of harvesting.

## DESIGN

**A. For experiments on annual crops :**

- (i) Abbreviations for design : C.R.D.—Completely Randomised Design. R.B.D.—Randomised Block Design , L. Sq.—Latin Square , Confd.—Confounded , Fact.—Factorial. (other designs and modifications of the above to be indicated in full). (ii) (a) No. of plots per block. (b) Block dimensions. (iii) No. of replications. (iv) Plot size. (a) Gross. (b) Net. (v) Border or guard rows kept. (vi) Whether treatments are randomised (separately in each block).

**B. For experiments on perennial crops :**

- (i) Abbreviations for designs : C.R.D.—Completely Randomised Design ; R.B.D.—Randomised Block Design ; L.Sq.—Latin Square ; Confd.—Confounded. (other designs and modifications of the above indicated in full). (ii) (a) No. of plots per block. (b) Block dimensions. (iii) No. of replications. (iv) No. of trees/plot. (v) Border or guard rows kept. (vi) Are treatments randomised.

**C. For experiments on cultivators' fields :**

- (i) Method of selection of experimental sites. (ii) No. and distribution of experiments. (iii) Plot size. (a) Gross. (b) Net. (iv) Whether treatments are randomised.

## GENERAL

**A. For experiments on annual crops :**

- (i) Crop conditions during growth with date of lodging, if any. (ii) Incidence of pests and diseases with control measures taken. (iii) Quantitative observations taken. (iv) In case of repetition in successive years—(a) from what year to what year, (b) whether treatments were assigned to the same plots in the same manner every year, (c) reference to combined analysis, if any. (v) In case of repetition in other places (a) names of the places along with reference and (b) reference to combined analysis, if any. (vi) Abnormal occurrences like heavy rains, frost, storm etc., if any. (vii) Any other important information.

**B. For experiments on perennial crops :**

- (i) Crop condition during the year. (ii) Incidence of pests and diseases with control measures taken. (iii) Quantitative observations taken. (iv) In case of repetition in successive years—(a) from what year to what year, (b) reference to combined analysis, if any. (v) Abnormal occurrences like heavy rains, frost, storm etc., if any. (vi) Any other important information.

**C. For experiments on cultivators' fields :**

- (i) Crop condition during growth. (ii) Incidence of pests and diseases with control measures taken. (iii) Quantitative observations taken. (iv) In case of repetition in successive years, (a) from what year to what year, (b) whether treatments were assigned to the same plots in the same manner every year, (c) reference to combined analysis, if any. (v) In case of repetition in other places names of places alongwith reference. (vi) Abnormal occurrences, like heavy rains, frost, storm etc., if any. (vii) Any other important information.

## TABLE OF CONVERSIONS TO METRIC UNITS

1 foot	=	304.8 mm.
1 acre	=	0.404606 hectare.
1 gram	=	0.035274 ounce = 0.085735 tola = 0.017147 chatak
1 kg.	=	2.20462 pounds = 1.07169 seers.
1 metric tone	=	0.9842 ton = 26.7923 maunds.
1 maund	=	0.373242 quintal = 37.3242 kg.
1 lb./ac.	=	1.12085 kg./hectare.
1 md./ac.	=	92.23002 kg./hectare = 0.9223 quintal/hectare.
1 ton/ac.	=	2.51071 metric tones/hectare.
1 gallon (Imp.)	=	4.54596 litres.

**GLOSSARY OF VERNACULAR NAMES OF CROPS**

Sl. No.	Name of Crop	Botanical Name	Assamese	Bengali	Oriya	Telugu	Tamil	Malayalam	Kannada	Marathi	Gujarati	Hindi	Punjabi

MAP OF ORISSA STATE SHOWING  
AGRO-CLIMATIC REGIONS, SOILS,  
AGRICULTURAL RESEARCH STATIONS  
ETC.

# ORISSA

## 1. General :

The State of Orissa lies on the eastern coast of India with 4 of its 13 districts lying along the coast. On the other three sides it is surrounded by the States of West Bengal, Bihar, Madhya Pradesh and Andhra Pradesh. The State has a geographical area of 38,504 thousand acres and a reporting area of 38,401 thousand acres. The land utilization figures for this State are provided in table 1 below :—

TABLE 1.  
Land utilization statistics of Orissa State (1958-59.)  
(Area in '000 acres.)

1. Reporting area	38,401
2. Forests	8,799
3. Barren & uncultivable land	3,557
4. Land put to non-agricultural uses	2,717
5. Culturable waste	3,504
6. Permanent pastures & other grazing land	1,819
7. Land under miscellaneous tree crops	1,143
8. Current fallows	2,269
9. Other fallow land	739
10. Net area sown	13,854
11. Total cropped area	14,714
12. Area sown more than once	860

## 2. Topography :

In the north is the plateau—the continuation of Chotanagpur plateau of Bihar—with a gentle rolling form and undissected flat lands cut by steep sided valleys. In the middle or heart of the state is the table land. This consists of watersheds of the three rivers, the Baitarani, the Brahmani and the Mahanadi. The hills in table-land are not long continuous ranges, but are generally scattered in groups, running in the east and west direction and the entire area slopes from west to east. To the east and south-west of this table-land lies the Eastern Ghat division or the upland. These are ranges of dissected steep sided mountain ranges with canyons and fertile inter-mountain valleys and high plateaus or 'Dangarala'. The fourth is the coastal tract lying between the Eastern Ghat hill ranges and the Bay of Bengal.

The state can be divided into four distinct regions : (1) the northern plateau or lowland, (2) the central table-land, (3) the Eastern Ghat region or upland, and (4) the coastal tract.

The northern plateau, forms a part of the southern extension of the 'Central belt of India' and lies between 20° North latitude and 79°—87° East longitude. The hill ranges stretch from north to south and rise to an elevation of 2,500 to 3,500 ft. above sea level. On the extreme east, there lies the Similipal range of Mayurbhanj district. The central portion consists of rugged forest clad hills interspersed with fertile valleys. Considerable deposit of limestone in the nodular forms are found in this tract. The plateau is rich in iron ores, limestone and coal deposit and so has great potentialities for industrial development.

The central table land is the region of the Brahmani and the Mahanadi basins land and covers an area of about 14,259 sq. miles. The northern half of the Brahmani basin is thickly wooded and sparsely populated while the southern half contains a large number of fertile valleys. The Mahanadi basin spreads out into fertile plains, undulating landscape with a gradual slope from the northern or southern hill ranges of the Mahanadi.

The Eastern Ghat region is a section of the great line of Eastern Ghats which traverse the east coast of the Peninsular India and covers an area of about 17,190 sq. miles. The hill ranges run from north to south and are nowhere more than 50 miles from the sea.

The coastal belt covers an area of about 12,531 sq. miles and consists of three distinct tracts differing widely in their physical aspect. The first is a marshy weed land; the second is the cultivated alluvial plains, formed from the deposits of the rivers; and the third is the broken hill region and undulating tract which gradually ascends into weed land and hills of the central table-land.

### **3. Rain fall and climatic conditions :**

The state is in the subtropical belt of medium pressure. The chief characteristics of its climate are high temperature and medium rainfall. But topography has altered the climate of this region and four well-defined seasons prevail in this state :

1. Cold dry winter—December, January, February
2. Hot dry summer—March, April, May
3. Monsoon warm wet seasons—June, July, August, September
4. Cool autumn—October, November

The coastal region, due to proximity to the Bay, has a higher rainfall. Most parts of the state have also a high rainfall owing to hillyness and forest cover. The state is also affected by cyclonic storms from the Bay of Bengal which cross the coast of Orissa and cause heavy rain fall in the Eastern Ghat. The average annual rainfall of the state is 58 inches, with 72 rainy days; about 45 inches are received during June to September, with 10 to 16 days of rain in each month. July receives maximum rains while December and January are the driest months, with a maximum of about 3" of rainfall.

The mean annual maximum temperature is 91°F, it rises to 101°F in April and May and falls to 97°F and 95°F in June and July respectively. The mean minimum is 73°F, it falls to 59° F or 60° F in December and January.

There is great variation in the humidity in different sections of Orissa. In Koraput, the humidity ranges from 92 per cent saturation in August and September, the wettest months, to 60 per cent in March and 61 per cent in April and May. Koraput is the dampest part in the state during the rainy season. The central table land has the lowest relative humidity during March, April and May. In the driest part of the state, the relative humidity varies from 51 to 54 per cent during the same months. The relative humidity of the coastal areas is highest and it never falls below 70 per cent.

### **4. Soils :**

*Northern plateau:* The plateau consists of iron ore series of the upper Dharwar system and is rich in hematite, limenite and thick and extensive deposits of magnetite and dolomitic limestone in the western section. The tract has a type of soil known as red soil. The soil is neutral in reaction, poor in organic matter and plaint nutrients. Lime content is small while that of magnesium is negligible and of phosphate low. They are comparatively more open in texture and vary from loamy to sandy and rarely clayey. These characteristics are most marked in the Bamanghati subdivision of Mayurbhanj and the Bonai basin of Sundergraph district.

*Central table land:* The relief, the type of native vegetation and the rocks that form the parent material of the central table land afford bases to subdivide into atleast three zones each with a distinct soil type (1) north east section with yellow earth, (2) central and south west section of black earth, and (3) eastern plain of laterite soil extending upto where the Mahanadi disgorges into the delta region.

Yellow earth is the predominant soil type of the region between the Ille and the champaoli in Rairakhol. Yellow soils are predominant on smooth relief where ground water stands at a depth of a few feet.

Whole of the central section of the table land comprising Athamlik, Angul and Boudh sub-divisions on either side of the Mahanadi and the area between the Sukiel and the Loisinga Zamindari district, consists of black earth popularly known as the 'black cotton soil or *regur* of India'. The soils in general have a higher content of clay. Lime concretions known as *kankar* or *genguti* are found mixed with soil. The high clay content of the soil makes it crack during summer and sticky during the rainy season.

The soil is alkaline in reaction and the pH varies from 7.5 to 8.5. It generally contains soluble salts in all horizons though these do not reach the toxic limit for plant growth. Percentage of potassium, lime and magnesium are high but the nitrogen content is low, as is common in the Indian soil, ranging between 0.12 percent to 0.05 percent.

**Eastern Ghat :** Topography has played an important part in soil formation of this region. Differences in slope and elevation are usually associated with differences in drainage which has a strong influence on the development of soil and the uses to which they are put. The high humidity coupled with luxuriant forest vegetation creates an environments for the development of a group of soil. There is therefore a vertical distribution of zonal soil types viz., skeletal soil on the upper portion of the slope laterite, gray brown pod soil and valley soil.

**Coastal division :—**There are four well defined divisions of the deltaic alluvial soils from north to south as detailed below :

1. *North section* :—Delta of North Balasore formed by the Suvarnrekha, the Burabalong the Kansabonser and the salandi. The soil is more sandy or sandy loam.
2. *Central section* :—Delta of Baitarani and Brahmani. This includes part of Bhadrak sub division and Jaipur sub-division. Soil varies from clay loam to stiff clay.
3. *Mahandi delta* :—Delta of the Mahanadi and her tributaries in the Cuttack and in the Puri districts, *stratified* into clay silt, sandy and gritty.
4. *Rushikulya delta*:—More sandy in nature. Except the Rushikulya delta, a large part of the other delta areas are subjected to flood.

##### 5. Irrigation :

The State has a total irrigated area of 2414 thousand acres. The extent of area irrigated through different sources is given in table 2 below :

TABLE 2

Area irrigated through different sources (1958-59)  
(Area in '000 acres)

Source	Acreage	% area irrigated.
Government canals	487	20.2
Private canals	69	2.9
Tanks	1223	50.6
Wells	94	3.9
Other sources	541	22.4
Total	2414	100.0

##### 6. Agricultural Production and Normal cropping pattern.

Important crop of this area is paddy. Rest are all subsidiary crops occupying small areas. The total area, production and average yield of various crops in this state are given in table 3 below :

TABLE 3

Area, production and av. yield per acre of principal crops (1963—64).

	Area in '000 acres	Production in '000 tons	Yield. in lb./ac
Paddy	10,641	4238	892.1
Ragi	136	26	428.2
Maize	77	13	378.2
Other cereals	144	43	668.9
Pulses	2,144	423	441.9
Sesamum	242	20	185.1
Rape & Mustard	130	28	482.5
Groundnut	145	53	818.8
Other Oilseeds	91	20	492.3
Mesta	38	75	2**
Sugarcane	79	1554	19.67*
Jute	135	467	3.5**

\* Yield of cane in ton/ac.

\*\* Bales of 400 lb./ac.

**7. Experimentation and Agricultural Research.**

There were in all 207 experiments conducted during the period 1954-59 reported from this state. Besides, 145 experiments collected under the Model Agronomy Experiments, T.C.M.

TABLE 4  
Distribution of experiments crop-wise and type-wise

Crop	M	MV	C	CV	CM	IM	D	DI	CMV	Total
Paddy	56	15	5	1	6	1	5	2	—	91

experiments and the Simple Fertilizer Trial Schemes of the Indian Council o`Agricultural Research and the experiments conducted on cultivators' fields by the State during this period have also been included in the compendium. Experiments with manurial combination of treatments formed about 75% of the total of which about 56% were purely of manurial type. Among food crops paddy accounted for the largest number of experiments conducted, about 44% of the experiments being on this crop. Among cash crops the largest number of experiments were conducted on Sugarcane these being about 15% of the total. Agricultural Research Stations at Bhubaneswar and Sambalpur are the two principal Research Stations in the State. Table 4 below gives the crop and typewise breakup of the experiments type-wise.

About 54.6% of the trials were laid out with Randomised block design and about 35.3% of the trials were with split plot and rest with confounded arrangement of treatments. Block size varied from 32 to 18 in case of R.B.D. while in split plot arrangement the no. of main plots varied from 2 to 12 and the no. of sub-plots per main plot generally varied from 2 to 9, although in a number of experiments with varieties forming part of the treatments as many as 45 sub-plots per main-plot were also recorded. The net plot size in an R.B.D. ranged between 1/1200th to 1/36.3 of an acre. In case of split-plot designs the net plot size varied from 1/2075 to 1/85th of an acre. Experiments with as many as 9 replications have been obtained while there have been a few experiments with 1/8th factorial replicate.

## PARTICULARS OF RESEARCH STATIONS AND SOIL ANALYSIS

### 1. Citrus Fruit Research Station, Angul.

#### A. General information :

(i) Dhenakanal district, 16 miles from Meeramandali R.S. Lat. 21° N/Long. 85.2° E/Alt. —N.A. (ii) It represents red laterite soil tract (black cotton type of soil). (iii) Started in 1946. (iv) Only perennial crops. (v) Research on citrus varieties and collection of different varieties are the main aspects of research.

#### B. Normal rainfall in mm. :

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	to March	April	May	Total
121	368	124	132	58	58	—	—	51	13	925

(Av. based on rainfall data for 1957-58).

#### C. Irrigation and drainage facilities :

(i) (a) Facilities available since 1948. (b) Tanks are available for irrigation. (ii) There is a proper drainage system.

#### D. Soil type and soil analysis :

(i) Red loamy soil with an average depth of 2.1', black colour and medium structure. (ii) Chemical analysis and (iii) Mechanical analysis--N.A.

#### E. No. of experiments :

Nagpur orange 9, Total=9.

### 2. Agricultural and Demonstration Farm, Barpalli.

#### A. General information :

(i) 82 miles from Sambalpur R.S. (ii) to (v) N.A.

#### B. Normal rainfall to D. Soil type and soil analysis :

Details--N.A.

#### E. No. of experiments :

Sugarcane 1, Niger 3, Total=4.

### 3. Rice Research Sub-Station, Berhampur.

#### A. General information :

(i) Ganjam district, 6 miles from Berhampur R.S. ; Lat 19.5° N/Long. 84.3° E/Alt. N.A. As for general topography, the research station has (a) high land depending on the vagaries of the monsoon and low land having facilities. (ii) It represents coastal tract having red and clay soils. (iii) Started in 1932. (iv) Paddy, Dhaincha, Mung, *Biri* and Kulthi are the various crops tried in experimentation. (v) Breeding improved paddy varieties is the main programme of research.

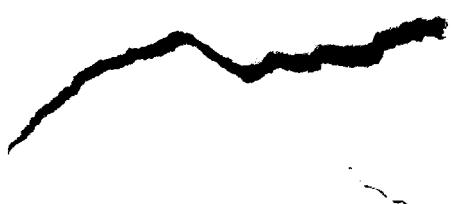

#### B. Normal rainfall in mm. :

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
63	242	245	54	564	288	—	22	—	—	4	—	1422

(Av. based on rainfall data for 1958-59. This year rainfall was abnormal).

#### C. Irrigation and drainage facilities :

(i) (a) Facilities available since 1946. (b) Canal irrigation. (ii) No proper drainage is available.

**D. Soil type and soil analysis :**

(i) Laterite soil, slight grey in colour, to a depth of 9" to  $1\frac{1}{2}'$  and has very fine sandy structure with clay colloidal patch. (ii) Chemical analysis and (iii) Mechanical analysis—N.A.

**E. No. of experiments :**

Paddy 17, Total=17.

**4. State Research Station, Bhubaneswar.****A. General information :**

(i) Puri district, 4 miles from Bhubaneswar R.S. Lat.  $20.2^\circ$  N/Long.  $86.1^\circ$  E/Alt. 85'. (ii) It represents small valley tract with adjoining red soils. Land remains marshy and the water patches are called *dahals*. There is also a part of high land tract. (iii) Started in 1954. (iv) Paddy after paddy is the usual pattern. (v) Research with cultural, Rotational manurial and irrigational trials on paddy, wheat, pulses and oilseeds.

**B. Normal rainfall in mm. :**

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
249	324	238	221	162	142	—	32	8	49	39	45	1555

(Av. basal on rainfall data for the period 1950-53).

**C. Irrigation and drainage facilities :**

(i) (a) Facilities available since 1957. (b) Tank irrigation. (ii) Open drainage system is available.

**D. Soil type and soil analysis :**

(i) Red and yellow lateritic soils with varying depth from shallow to 10'. The soil has grey colour with yellow sub-soil and light red soil with deep red sub-soil. Red soils have comparatively looser structure than other paddy soils which are more compact with stiff sub-soil.

## (ii) Chemical analysis.

Sand	Silt	Clay	Total carbon	Exchangeable base			
80.2	13.0	5.5	0.54	Ca	Hg	Mn	pH
Total N		Base exchange m.e./100		1.37	0.90	0.76	5.6
0.036		2.70					

(iii) Mechanical analysis—N.A.

**E. No. of experiments :**

Paddy 49, Wheat 3, Bhindi 1, Brinjal 4, Potato 1, Sweet potato 7, Yam 2, Tapioca 4, Colacasia 3, Arrow root 1, Ginger 1, Biri and mung 1, Sugarcane 7, Groundnut 1, Linseed 1, Gingelly 3, and Niger 1, Total 91.

**5. Cotton Research Station, Chakuli.****A. General information :**

(i) Sambalpur district, 35 miles from Sambalpur R.S. Lat.  $21^{\circ}22'$  N/Long  $33^{\circ}48'$  E/Alt. N.A. (ii) It represents upland tract of medium level. (iii) Started in 1956. (iv) Paddy, Cotton, Wheat, Groundnut and G.M. crops. (v) Research on economic cropping pattern suitable for Hirakud area.

**B. Normal rainfall in mm. :**

Details—N.A.

**C. Irrigation and drainage facilities :**

(i) (a) Facilities available. (b) Perennial supply from Hirakud reservoir. (ii) No proper drainage is available.

**D. Soil type and soil analysis :**

- (i) Shallow soil of 3' depth, reddish brown colour and spheroidal structure.
- (ii) The soil is acidic with a pH of 5.1 to 6.4. Soluble salt content is very low, available P is very low.
- (iii) Mechanical analysis—N.A.

**E. No. of experiments :**

Cotton 3, Total=3.

**6. Rice Research Sub-Station, Jeypore.****A. General information :**

- (i) Koraput district, 106 miles from Vizianagaram R.S. Lat 18.2° N/Long 82.5° E/Alt. 2500'. Laterite and clayey soils.
- (ii) Half of the experimental area represents plain tract and the other half terraced system.
- (iii) Started in 1937.
- (iv) G.M. followed by paddy and early paddy followed by wheat is generally adopted for cropping pattern.
- (v) Research on high yielding varieties of paddy and evolve varieties suitable for the tract. Study of cultural and manurial practices are the important aspects of the programme of research.

**B. Normal rainfall in mm. :**

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
151	494	665	245	143	15	--	2	--	36	63	56	1370

**C. Irrigation and drainage facilities :**

- (i) (a) and (b) N.A.
- (ii) National drainage is available.

**D. Soil type and soil analysis :**

- (i) Laterite soil varying from a depth of 1' and above soil is of light red, very light yellow of the black cotton soil type.
- (ii) Chemical and (iii) Mechanical analysis—N.A.

**E. No. of experiments :**

Paddy 1, Total=1.

**7. Sugarcane Research Sub-Station, Rayagada.****A. General information :**

- (i) Kalahandi district, 2 miles from Rayagada R.S.
- (ii. to 'v) N.A.

**B. Normal rainfall in mm. to D. Soil type and soil analysis :**

Details—N.A.

**E. No. of experiments :**

Sugarcane 22, Total 22.

**8. Agricultural Research Station, Sambalpur.****A. General information :**

- (i) Sambalpur district, 2 miles from Sambalpur R.S. Lat 20°30' N/Long 84°E/Alt. 595'. Central table land.
- (ii) It represents tract of Cuddapah rock system, resting uniformly on the schists and has a genesis of the Archean age. The rocks are normally horizontally bedded. The lowest land consists of sandy stone overlaid by clays and clay succeeded by lime stone.
- (iii) Started 1954.
- (iv) During Kharif : G.M. paddy and Groundnut. During Rabi : Wheat, pulse as paddy.
- (v) Programme of Research is as follows.

**Agronomy Section :** To evolve suitable crop pattern for the Hirakud area as to study cultural, manurial and irrigation aspects of major crops of this area.

**Botany Section :** To introduce new crops and study on evolving new varieties of different crops in this area.

**Chemistry Section :** To study the effect of intensive cultivation through perennial irrigation on the soil of this area.

**Mycology Section :** To severy the aspect of diseases of major crops of this area and to study various control measures suitable for them.

**Entomology Section :** To study about the control of various pests attacking the major crops of this area.

**B. Normal rainfall in mm. :**

June	July	Aug.	Sept.	Oct.	Nov. to Feb.	March	April	May	Total
332	335	366	554	89	—	3	—	1	1730

(Av. based on data for 1955)

**C. Irrigation and drainage facilities :**

(i) (a) Facilities available since 1955. (b) Tanks and lift irrigation. (ii) Proper drainage system is available.

**D. Soil type and soil analysis :**

(i) Soil depth varies from 2' to 3' with pale brown to dark grey colour and granular to crumble structure. (ii) Chemical analysis : Total N—0.06 to 0.07%. Total P<sub>2</sub>O<sub>5</sub>—0.08 to 0.14%. Total K<sub>2</sub>O—0.52 to 0.62%. T.S.S.—0.05 to 0.83%. pH—5.1 to 7.5 Organic matter 0.34 to 0.88%. Total exchange capacity 15.4 to 27 m.e./m.g. (iii) Mechanical analysis —N.A.

**E. No. of experiments :**

Paddy 23, Wheat 7, Maize 1, Brinjal 1, Potato 6, Sweet potato 1, Arhar 1, Sugarcane 1, Cotton 2, Jute 1, Tobacco 2, Groundnut 4, Berseem 2, Total 52.

## 9. Turmeric Research Station, G. Udaygiri.

**A. General information :**

(i) Phulbani district, 112 miles from Berhampur R.S., Lat 20.8° N/Long 84.2° E/Alt. 2535'. (ii) It represents valley situated at 15' above level to G. Udaygiri on the west. The tract is subject to soil erosion during rainy season. (iii) Started in 1943. (iv) N.A. (v) Research on turmeric studying the cultural, varietal and manurial aspects.

**B. Normal rainfall in mm. :**

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
196	271	537	232	85	30	—	—	—	13	9	127	1500

(Figures relate to rainfall record for the year 1953)

**C. Irrigation and drainage facilities :**

(i) (a) Facilities available since 1944. (b) Lift irrigation by pump. (iii) No drainage system.

**D. Soil type and soil analysis :**

(i) Clayey loam and sandy loam soils with depth 20' for red laterite and 15' for clay complex. Soil has red and brown colour. (ii) Chemical and (iii) Mechanical analysis—N.A.

**E. No. of experiments :**

Paddy 1, Turmeric 7, Total=8,

**Crop :- Paddy (*Kharif*).****Ref :- Or. 55(1).****Site :- Rice Res. Sub-Station, Berhampur.****Type :- 'M'.**

Object :—To test the efficiency of Ammonium Chloride as a source of N.

**1. BASAL CONDITIONS :**

Object :—To find out the suitability of split application of N for Paddy.

**1. BASAL CONDITIONS :**

(i) (a) Nil. (b) Paddy. (c) 20 lb./ac. of N as A/S top dressed. (ii) (a) Sandy loam. (b) N.A. (iii) 20.8.1957 and 21.8.1957. (iv) (a) and (b) Ploughing during summer followed by three puddlings. Twice lading at the time of transplanting. (c) to (e) N.A. (v) No. (vi) T—90 (late and improved variety). (vii) Unirrigated. (viii) Two weedings. (ix) and (x) N.A.

**2. TREATMENTS :**

$T_1 = 10$  lb./ac. of N at puddling + 10 lb./ac. one month after puddling + 10 lb./ac. at flowering.

$T_2 = 15$  lb./ac. of N at puddling + 15 lb./ac. one month after puddling.

$T_3 = 30$  lb./ac. of N at puddling.

$T_4 = 30$  lb./ac. of N one month after puddling.

$T_5 = 30$  lb./ac. of N before flowering.

N applied as A/S.

**3. DESIGN :**

(i) R.B.D. (ii) (a) 5. (b) N.A. (iii) 4. (iv) (a)  $34\frac{1}{2}' \times 10'$ . (b)  $33' \times 9'$ . (v)  $9'' \times 6''$ . (vi) Yes.

**4. GENERAL :**

(i) Poor due to drought. (ii) N.A. (iii) Yield of grain. (iv) (a) and (b) No (c) Nil. (v) (a) and (b) Nil. (vi) Heavy rains affected the yield. (vii) Nil.

**5. RESULTS :**

(i) 1111 lb./ac. (ii) 217.0 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of grain in lb./ac.

Treatment	$T_1$	$T_2$	$T_3$	$T_4$	$T_5$
Av. yield	1261	1064	1068	1276	885

S.E./mean = 108.5 lb./ac.

**Crop :- Paddy (Kharif).****Ref :- Or. 59(23).****Site :- Agri. Res. Stn., Bhubaneswar.****Type :- 'M'.**

Object :—To find out the response of Paddy to application of N and P.

**1. BASAL CONDITIONS :**

(i) (a) Paddy—Fallow. (b) Nil. (c) N.A. (ii) (a) Sandy loam. (b) N.A. (iii) 7.6.1959/3.7 1959. (iv) (a) 2 ploughings with mould board plough. Puddling with *desi* plough before planting to 4"-5" depth. (b) Line planting. (c) 15 srs./ac. approximately. (d)  $9'' \times 9''$ . (e) 3-4. (v) F.Y.M. at 5000 lb./ac. (vi) T—1242 (late). (vii) Nil. (viii) Once weeding with Japanese weeder followed by hand weeding. (ix) 47.94". (x) 17.12.1959.

**2. TREATMENTS :**

All combinations of (1) and (2)

(1) 3 levels of N :  $N_0 = 0$ ,  $N_1 = 30$  and  $N_2 = 60$  lb./ac.

(2) 3 levels of  $P_2O_5$  :  $P_0 = 0$ ,  $P_1 = 30$  and  $P_2 = 60$  lb./ac.

N as A/S and  $P_2O_5$  as Super.

**3. DESIGN :**

(i) Factor in R.B.D. (ii) (a) 9. (b) N.A. (iii) 9. (iv) (a)  $15' \times 29'$ . (b)  $13\frac{1}{2}' \times 17\frac{1}{2}'$ . (v) One row all round. (vi) Yes.

**4. GENERAL :**

(i) Normal. (ii) Rat damage in some plots. No control measure. Endrex was sprayed during growth period to control mealy bugs. (iii) Height, no. of tillers, length of earhead, no. of chaff and grain per earhead—grain and straw yield. (iv) (a) 1958—continuing. (b) Yes. (c) Nil. (v) (a) and (b) Nil. (vi) and (vii) Nil.

## 5. RESULTS :

- (i) 2139 lb./ac. (ii) 355 lb./ac. (iii) Main effects of N and P are not significant. Interaction N×P is significant. (iv) Av. yield of grain in lb./ac.

	P <sub>0</sub>	P <sub>1</sub>	P <sub>2</sub>	Mean
N <sub>0</sub>	1975	2229	1857	2020
N <sub>1</sub>	1992	2306	2149	2149
N <sub>2</sub>	2428	2092	2224	2248
Mean	2132	2209	2077	2139

S.E. of any marginal mean = 68.3 lb./ac.  
S.E. of body of table = 118.5 lb./ac.

**Crop :- Paddy (*Kharif*).**

**Ref :- Or. 58(38).**

**Site :- Agri. Res. Stn., Bhubaneswar.**

**Type :- 'M'.**

**Object** :—To study the effect of P<sub>2</sub>O<sub>5</sub> applied to previous legume crop on the yield of succeeding cereal crop.

## 1. BASAL CONDITIONS :

- (i) (a) Nil. (b) *Biri+Mung*. (c) As per treatments. (ii) (a) Sandy loam. (b) N.A. (iii) 25.6.1958 and 27.7.1958. (iv) (a) Ploughing, 4 cross ploughings to 4" depth followed by laddering. (b) Transplanting (c) 20 lb./ac. (d) 9"×9". (e) 4. (v) Nil. (vi) T—141 (medium). (vii) Unirrigated (viii) 2 weedings and roguing. (ix) *Kharif* 50.43". (x) 28.11.1958.

## 2. TREATMENTS :

**Main-plot treatments :**

All combinations of (1) and (2)+one control (fallow).

(1) 2 legumes : L<sub>1</sub>=*Biri* and L<sub>2</sub>=*Mung*.

(2) 3 levels of P<sub>2</sub>O<sub>5</sub> : P<sub>0</sub>=0, P<sub>1</sub>=40 and P<sub>2</sub>=80 lb./ac.

**Sub-plot treatments :**

3 levels of N as A/S : N<sub>0</sub>=0, N<sub>1</sub>=15 and N<sub>2</sub>=30 lb./ac.

N as A/S to be applied to the cereal crop grown in all the plots including fallow plots.

## 3. DESIGN :

- (i) Split-plot. (ii) (a) 7 main-plots/replication; 3 sub-plots/main-plot. (b) N.A. (iii) 3. (iv) (a) 20'3"×21'6". (b) 18'9"×20'. (v) One row around the net plot. (vi) Yes.

## 4. GENERAL :

- (i) Good. (ii) N.A. (iii) Height, tiller and no. of grain and straw. (iv) (a) 1956—contd. (b) Yes. (c) Nil. (v) (a) and (b) Nil. (vi) and (vii) Nil.

## 5. RESULTS :

- (i) 2702 lb./ac. (ii) (a) 498 lb./ac. (b) 300 lb./ac. (iii) None of the effects is significant. (iv) Av. yield of grain in lb./ac.

Fallow : N<sub>0</sub>=2602, N<sub>1</sub>=2592 and N<sub>2</sub>=2694 lb./ac.

	P <sub>0</sub>	P <sub>1</sub>	P <sub>2</sub>	L <sub>1</sub>	L <sub>2</sub>	Mean
N <sub>0</sub>	2734	2681	2683	2887	2513	2700

**Crop :- Paddy (Kharif).**

**Site :- M.A.E. Farm, Barpalli.**

**Ref :- Or. 59(MAE).**

**Type :- 'M'.**

Object :—To study the long term effect of N, P, K and bulky manure.

#### 1. BASAL CONDITIONS :

(i) (a) Maize—Paddy—Cotton. (b) Maize. (c) Nil. (ii) (a) Red loam. (b) N.A. (iii) N.A. (iv) (a) 3 ploughings. (b) Transplanted. (c)—. (d) 9"×6". (e) N.A. (v) Nil. (vi) T—141 (medium). (vii) Unirrigated. (viii) to (x) N.A.

#### 2. TREATMENTS :

All combinations of (1), (2), (3) and (4)

- (1) 3 levels of N as A/S : N<sub>0</sub>=0, N<sub>1</sub>=30 and N<sub>2</sub>=60 lb./ac.
- (2) 3 levels of P<sub>2</sub>O<sub>5</sub> as Super : P<sub>0</sub>=0, P<sub>1</sub>=30 and P<sub>2</sub>=60 lb./ac.
- (3) 3 levels of K<sub>2</sub>O as Mur. of Potash : K<sub>0</sub>=0, K<sub>1</sub>=30 and K<sub>2</sub>=60 lb./ac.
- (4) 2 levels of F.Y.M. : F<sub>0</sub>=0 and F<sub>1</sub>=4000 lb./ac.

#### 3. DESIGN :

(i) 3<sup>3</sup>×2 fact. confd. Interaction NPK<sup>2</sup> is confd. (ii) (a) 9 plots/block ; 6 blocks/replication. (b) N.A. (iii) 1. (iv) (a) 33'×16.5'. (b) 31'×14.5'. (v) 1' allround. (vi) Yes.

#### 4. GENERAL :

(i) Satisfactory. (ii) Attack of wild rats in most of the plots specially in plots with treatments N<sub>2</sub>P<sub>1</sub>K<sub>2</sub>F<sub>0</sub>, N<sub>2</sub>P<sub>1</sub>K<sub>1</sub>F<sub>1</sub>, N<sub>0</sub>P<sub>1</sub>K<sub>0</sub>F<sub>0</sub> in all the phases ; N<sub>0</sub>P<sub>0</sub>K<sub>2</sub>F<sub>1</sub> in cumulative effect, in N<sub>0</sub>P<sub>1</sub>K<sub>0</sub>F<sub>1</sub> (direct and residual effects). (iii) Grain yield. (iv) (a) 1957 (kharif)—contd. (b) Yes. (c) N.A. (v) (a) Kendrapara. (b) Nil. (vi) Nil. (vii) Values of plots severely damaged by rats were estimated.

#### 5. RESULTS :

##### Cumulative Effect

- (i) 2875 lb./ac. (ii) 718.8 lb./ac. (iii) Only N effect is highly significant. (iv) Av. yield of grain in lb./ac.

 S.E. of body of N×P, N×K or P×K table = 293.4 lb./ac.  
 S.E. of body of N×F, P×F or K×F table = 239.6 lb./ac.  
 (for cumulative direct and residual effects)

**Crop :- Paddy (Kharif).****Ref :- Or. 57(MAE).****Site :- M.A.E. Farm, Barpalli.****Type :- 'M'.**

Object :—Type IV—To study the effect of direct application of phosphate on a legume *vs* direct effect of N to the succeeding Paddy crop.

#### 1. BASAL CONDITIONS :

- (i) (a) No. (b) Legumes. (c) As per treatments. (ii) (a) Red loam. (b) N.A. (iii) July 1957/August 1957. (iv) (a) 3-4 ploughings and 2 plankings before sowing. (b) Transplanting. (c) 25 lb./ac. in nursery. (d) 9"×6". (e) N.A. (v) Nil. (vi) N.A. (vii) Irrigated. (viii) 1—2 weedings after sowing. (x) N.A. (x) Dec. 1957.

#### 2. TREATMENTS :

##### Main-plot treatments :

All combinations of (1) and (2) +a control (fallow plot L<sub>0</sub>P<sub>0</sub>).

(1) 2 legumes : L<sub>1</sub>=Pea and L<sub>2</sub>=Gram.

(2) 3 levels of P<sub>2</sub>O<sub>5</sub> as Super : P<sub>0</sub>=0, P<sub>1</sub>=40 and P<sub>2</sub>=80 lb./ac.

##### Sub-plot treatments :

3 levels of N as A/S : N<sub>0</sub>=0, N<sub>1</sub>=15 and N<sub>2</sub>=30 lb./ac.

P<sub>2</sub>O<sub>5</sub> applied to legumes and N applied to Paddy by broadcasting at the time of planting.

#### 3. DESIGN :

- (i) Split-plot. (ii) (a) 7 main-plots/block; 3 sub-plots/main-plot. (b) N.A. (iii) 3. (iv) (a) N.A. (b) 1/100 ac. (v) N.A. (vi) Yes.

#### 4. GENERAL :

(i) Crop adversely affected due to dry conditions. (ii) Case-worm attack noticed during September—October but controlled by cultural operations. Borer attack also noticed. (iii) Grain yield only. (iv) (a) No. (b) No. (c) N.A. (v) (a) Kendrapara. (b) Nil. (vi) Due to drought conditions during growth stage crop was effected adversely. Rains lacked during the month of September to November. (vii) Legume yields are L<sub>1</sub>P<sub>0</sub>=1613, L<sub>1</sub>P<sub>1</sub>=1703, L<sub>1</sub>P<sub>2</sub>=1860, L<sub>2</sub>P<sub>0</sub>=1637, L<sub>2</sub>P<sub>1</sub>=1769 and L<sub>2</sub>P<sub>2</sub>=1934 lb./ac.

#### 5. RESULTS :

- (i) 1729 lb./ac. (ii) (a) 85.4 lb./ac. (b) 93.2 lb./ac. (iii) N, P and control *vs* others effects are highly significant. Interactions N×L and N×P are significant. Other effects are not significant. (iv) Av. yield of grain in lb./ac.

	L <sub>0</sub> P <sub>0</sub>	L <sub>1</sub> P <sub>0</sub>	L <sub>1</sub> P <sub>1</sub>	L <sub>1</sub> P <sub>2</sub>	L <sub>2</sub> P <sub>0</sub>	L <sub>2</sub> P <sub>1</sub>	L <sub>2</sub> P <sub>2</sub>	Mean
N <sub>0</sub>	1127	1117	1130	1193	1183	1357	1283	1199
N <sub>1</sub>	1553	1623	1613	1720	1777	1797	1847	1704
N <sub>2</sub>	2070	2110	2177	2203	2333	2430	2667	2234
Mean	1583	1617	1640	1705	1764	1861	1932	1729

S.E. of difference of two

1. LP marginal means = 40.26 lb./ac.
2. N marginal means = 28.76 lb./ac.
3. N means at the same level of LP = 76.10 lb./ac.
4. LP means at the same level of N = 74.03 lb./ac.

**Crop :- Paddy (Kharif).****Ref :- Or. 56(MAE)****Site :- M.A.E. Farm, Barpalli.****Type :- 'M'.**

Object :—Type V—To study the most suitable time for the application of N.

#### 1. BASAL CONDITIONS :

- (i) (a) to (c) N.A. (ii) (a) Red loam. (b) N.A. (iii) 3rd week of July/middle of August. (iv) (a) Ploughings. (b) Transplanted. (c)—. (d) 9"×6". (e) N.A. (v) 20 lb./ac. of P<sub>2</sub>O<sub>5</sub>. (vi) N.A. (vii) Irrigated. (viii) Weeding. (ix) N.A. (x) December.

## 2. TREATMENTS :

All combinations of (1) and (2)+a control

(1) 2 sources of N : S<sub>1</sub>=Urea and S<sub>2</sub>=A/S.

(2) 7 times of application : T<sub>1</sub>=Application of fertilizers before planting, T<sub>2</sub>=application of fertilizers at planting, T<sub>3</sub>=application of fertilizers at tillering, T<sub>4</sub>=application of fertilizers half before planting and half at planting, T<sub>5</sub>=application of fertilizers half at planting and half at tillering, T<sub>6</sub>=application of fertilizers  $\frac{1}{2}$  before planting,  $\frac{1}{2}$  at planting and  $\frac{1}{2}$  a week before flowering and T<sub>7</sub>=application of fertilizers  $\frac{1}{4}$  each at planting, at tillering and one week before flowering.

## 3. DESIGN :

**Crop :- Paddy (*Kharif*).****Ref :- Or. 56(MAE).****Site :- M.A.E. Farm, Barpalli.****Type :- 'M'.**

Object :—Type VI—To study the effect of different types and levels of phosphate along with different methods of placement.

#### 1. BASAL CONDITIONS :

- (i) (a) to (c) N.A. (ii) (a) Red loam. (b) N.A. (iii) First week of August. (iv) (a) N.A. (b) Transplanted. (c) —. (d) 9"×6". (e) N.A. (v) 5,000 lb./ac. of F.Y.M. (vi) N.A. (vii) Irrigated. (viii) and (ix) N.A. (x) End of December, 1956.

#### 2. TREATMENTS :

- (1) 2 doses of  $P_2O_5$  :  $P_1=20$  and  $P_2=40$  lb./ac.
- (2) 2 sources of  $P_2O_5$  :  $S_1$ =Super and  $S_2$ =Ammo. Phos.
- (3) 4 methods of application of  $P_2O_5$  :  $M_1$ =Fertilizers broadcast before puddling,  $M_2$ =Fertilizers drilled before puddling,  $M_3$ =Seedlings dipped in mud slash and  $M_4$ =Applied as pellets at transplanting.

N equalised by applying A/S at the rate of 30 lb./ac. of N.

#### 3. DESIGN :

- (i)  $2^2 \times 4$  Fact. confd. (ii) (a) 8 plots/block ; 2 blocks replication. (b) N.A. (iii) 3. (iv) (a) N.A. (b) 1/100 ac. (v) N.A. (vi) Yes.

#### 4. GENERAL :

- (i) Nil. (ii) Incidence of case worm. Control measures adopted. (iii) Grain yield. (iv) (a) to (c) N.A. (v) (a) and (b) Nil. (vi) and (vii) Nil.

#### 5. RESULTS :

- (i) 3202 lb./ac. (ii) 277.5 lb./ac. (iii) Only P effect is significant. (iv) Av. yield of grain in lb./ac.

	$M_1$	$M_2$	$M_3$	$M_4$	Mean	$S_1$	$S_2$
$P_1$	3083	3033	3150	3167	3108	3142	3075
$P_2$	3333	3283	3233	3333	3296	3259	3333
Mean	3208	3158	3191	3250	3202	3200	3204
$S_1$	3250	3100	3283	3167			
$S_2$	3167	3217	3100	3333			

S.E. of marginal mean of P or S	= 56.6 lb./ac.
S.E. of marginal mean of M	= 80.1 lb./ac.
S.E. of body of P×S table	= 80.1 lb./ac.
S.E. of body of P×M or S×M table	= 113.3 lb./ac.

**Crop :- Paddy (*Kharif*).****Ref :- Or. 58(MAE).****Site :- M.A.E. Farm, Barpalli.****Type :- 'M'.**

Object :—Type VI—To study the effect of different types and levels of phosphate along with different methods of placement.

#### 1. BASAL CONDITIONS :

- (i) (a) to (c) N.A. (ii) (a) Red loam. (b) N.A. (iii) 2nd week of August. (iv) (a) 3 ploughings. (b) Transplanting. (c)—. (d) 9"×6". (e) Nil. (v) and (vi) N.A. (vii) Irrigated. (viii) 3 weedings. (ix) and (x) N.A.

## 2. TREATMENTS:

All combinations of (1), (2) and (3)+3 control plots/replication.

- (1) 2 doses of  $P_2O_5$  :  $P_1=20$  and  $P_2=40$  lb./ac.
- (2) 3 sources of  $P_2O_5$  :  $S_1=\text{Super}$ ,  $S_2=\text{Ammo. Phos.}$  and  $S_3=\text{Dicalcium Phosphate}$ .
- (3) 3 methods of placement of  $P_2O_5$  :  $M_1=\text{Broadcast}$ ,  $M_2=\text{Dipping in slush}$  and  $M_3=\text{Pellet form}$ .

## 3. DESIGN :

(i)  $3^2 \times 2 + 3$  Fact. confd. (ii) (a) 7 ; 3 blocks/replication. (b) N.A. (iii) 4. (iv) (a)  $33' \times 16.5'$ . (b)  $31' \times 14.5'$ . (v) 1' alround. (vi) Yes.

## 4. GENERAL :

(i) N.A. (ii) Worm and stem-borer. (iii) Grain yield. (iv) (a) 1956—contd. (b) No. (c) Nil. (v) (a) and (b) Nil. (vi) and (vii) Nil.

## 5. RESULTS :

(i) 2143 lb./ac. (ii) 261.7 lb./ac. (iii) None of the effects is significant. (iv) Av. yield of grain in lb./ac.

Control=2158 lb./ac.

	$M_1$	$M_2$	$M_3$	Mean	$S_1$	$S_2$	$S_3$
$P_1$	2175	2083	2133	2130	2142	2117	2133
$P_2$	2133	2117	2200	2150	2133	2250	2067
Mean	2154	2100	2166	2149	2137	2183	2100
$S_1$	2100	2087	2225				
$S_2$	2312	2075	2162				
$S_3$	2050	2137	2112				

S.E. of marginal mean of M or S = 53.4 lb./ac.

S.E. of marginal mean of P = 43.6 lb./ac.

S.E. of body of  $M \times S$  table = 98.9 lb./ac.

S.E. of body of  $M \times P$  or  $S \times P$  table or control mean = 75.5 lb./ac.

**Crop :- Paddy (*Kharif*).**

**Site :- M.A.E. Farm, Barpalli.**

**Type :- 'M'.**

Object:—Type VI—To study the effect of different types and levels of phosphate along with different methods of placement.

## 1. BASAL CONDITIONS :

(i) (a) Nil. (b) Fallow. (c) Nil. (ii) (a) Clay to clay loam. (b) N.A. (iii) 14, 15.8.1959. (iv) (a) 6 ploughings besides puddling after rain. (b) Transplanting (c)—. (d)  $9'' \times 6''$ . (e) N.A. (v) 50 lb. of cowdung per plot. (vi) T—1242 (late). (vii) Irrigated. (viii) Weeding. (ix) N.A. (x) 28.12.1959.

## 2. TREATMENTS and 3. DESIGN :

Same as in expt. no. 58(MAE) on page 46.

Hyperphosphate applied in the absence of Ammo. Phos.

## 4. GENERAL:

(i) Germination good. (ii) Nearly 30% of the plots were damaged severelly by blast. Treated with endrex. (iii) Grain and straw yield. (iv) (a) 1956 (*kharif*)—contd. (b) No. (c) Nil. (v) (a) and (b) No. (vi) and (vii) Nil.

## 5. RESULTS:

(i) 2405 lb./ac. (ii) 255.1 lb./ac. (iii) M effect is significant, P effect and interaction  $S \times M$  are highly significant. Other effects are not significant. (iv) Av. yield of grain in lb./ac.

Control = 2608 lb./ac.

	M <sub>1</sub>	M <sub>2</sub>	M <sub>3</sub>	Mean	S <sub>1</sub>	S <sub>2</sub>	S <sub>3</sub>
P <sub>1</sub>	2252	2397	2148	2266	2252	2197	2348

S <sub>3</sub>	2280	2530	2370				

S.E. of the marginal mean of P or S = 52.1 lb./ac.  
 S.E. of the marginal mean of M = 42.5 lb./ac.  
 S.E. of body of table M×S = 95.4 lb./ac.  
 S.E. of body of table P×S or P×M or control mean = 73.6 lb./ac.

**Crop :- Paddy (Kharif).****Ref :- Or. 56(MAE).****Site :- M.A.E. Farm, Kendrapara.****Type :- 'M'.**

Object :—Type II—To study the long term effects of three levels of N, P, K and 2 levels of bulky manure

#### 1. BASAL CONDITIONS :

- (i) (a) to (c) N.A. (ii) (a) Sandy loam to clay loam. (b) N.A. (iii) 7, 8.8.1956. (iv) (a) N.A. (b) Transplanted. (c)—. (d) 9"×9". (e) N.A. (v) N.A. (vi) T—141 (medium). (vii) Unirrigated. (viii) and (ix) N.A. (x) 17.12.1956.

#### 2. TREATMENTS :

- (1) 3 levels of N as A/S : N<sub>0</sub>=0, N<sub>1</sub>=30 and N<sub>2</sub>=60 lb./ac.  
 (2) 3 levels of P<sub>2</sub>O<sub>5</sub> as Super : P<sub>0</sub>=0, P<sub>1</sub>=30 and P<sub>2</sub>=60 lb./ac.  
 (3) 3 levels of K<sub>2</sub>O as Pot. Sulphate : K<sub>0</sub>=0, K<sub>1</sub>=30 and K<sub>2</sub>=60 lb./ac.  
 (4) 2 levels of F.Y.M. = F<sub>0</sub>=0 and F<sub>1</sub>=5,000 lb./ac.  
 Fertilizers broadcast at planting.

#### 3. DESIGN :

- (i) 3<sup>3</sup>×2 Fact confd. Interaction NPK<sup>3</sup> is confd. in F<sub>0</sub> and F<sub>1</sub>. (ii) (a) 9 plots/block; 6 blocks/replication. (b) N.A. (iii) 1. (iv) (a) 33'×16.5'. (b) 29'×15'. (v) 2'×9". (vi) Yes.

#### 4. GENERAL :

- (i) Poor germination in general. (ii) Rice 'burnt' disease noticed at a later stage. (iii) Grain and straw yield. (iv) (a) 1956—contd. (b) Yes. (c) Nil. (v) (a) Barpalli. (b) Nil. (vi) and (vii) Nil.

#### 5. RESULTS :

- (i) 2299 lb./ac. (ii) 352.0 lb./ac. (iii) Interaction NPK alone is significant. (iv) Av. yield of grain in lb./ac.

	P <sub>0</sub>	P <sub>1</sub>	P <sub>2</sub>	K <sub>0</sub>	K <sub>1</sub>	K <sub>2</sub>	F <sub>0</sub>	F <sub>1</sub>	Mean

Object :—Type IV—To study the effect of direct application of phosphate on a legume *vs* direct effect of N to the succeeding Paddy crop.

#### 1. BASAL CONDITIONS :

(i) (a) Nil. (b) and (c) As per treatments. (ii) (a) Mahanadi alluvium. (b) N.A. (iii) July-August, 1957. (iv) (a) Preliminary and final puddlings. (b) Transplanting. (c) 40 lb./ac. in nursery. (d) 9"×6". (e) N.A. (v) Nil. (vi) N.A. (vii) Irrigated. (viii) Weeding only. (ix) N.A. (x) Nov.—Dec. 1957.

#### 2. TREATMENTS :

##### Main-plot treatments :

All combinations of (1) and (2)+a control (fallow plot L<sub>0</sub>P<sub>0</sub>)

(1) 2 legumes L<sub>1</sub>=Moong and L<sub>2</sub>=Biri.

(2) 3 levels of P<sub>2</sub>O<sub>5</sub> as Super : P<sub>0</sub>=0, P<sub>1</sub>=40 and P<sub>2</sub>=80 lb./ac.

##### Sub-plot treatments :

3 levels of N as A/S : N<sub>0</sub>=0, N<sub>1</sub>=15 and N<sub>2</sub>=30 lb./ac.

P<sub>2</sub>O<sub>5</sub> applied to legumes and N applied to paddy crop broadcast at transplanting.

#### 3. DESIGN :

(i) Split-plot. (ii) (a) 7 main-plots/blocks ; 3 sub-plots/main-plot. (b) N.A. (iii) 3. (iv) (a) N.A. (b) 1/100 ac. (v) N.A. (vi) Yes.

#### 4. GENERAL :

(i) Stunted crop growth observed. (ii) Rice grass-hoppers in general attacked. (iii) Grain and straw yield. (iv) (a) and (b) No. (c) Nil. (v) (a) Barpalli. (b) Nil. (vi) Drought conditions prevailed. (vii) Legume yields are L<sub>1</sub>P<sub>0</sub>=3036, L<sub>1</sub>P<sub>1</sub>=3267 L<sub>1</sub>P<sub>2</sub>=3036, L<sub>2</sub>P<sub>0</sub>=3349, L<sub>2</sub>P<sub>1</sub>=3119 and L<sub>2</sub>P<sub>2</sub>=3193 lb./ac.

#### 5. RESULTS :

(i) 3174 lb./ac. (ii) (a) 214.1 lb./ac. (b) 308.9 lb./ac. (iii) Interaction L×P alone is significant. (iv) Av. yield of grain in lb./ac.

	L <sub>0</sub> P <sub>0</sub>	L <sub>1</sub> P <sub>0</sub>	L <sub>1</sub> P <sub>1</sub>	L <sub>1</sub> P <sub>2</sub>	L <sub>2</sub> P <sub>0</sub>	L <sub>2</sub> P <sub>1</sub>	L <sub>2</sub> P <sub>2</sub>	Mean

Mean	3233	3036	3264	3033	3344	3116	3192	3174

S.E. of difference of two

1. LP marginal means = 100.9 lb./ac.
2. N marginal means = 95.3 lb./ac.
3. N means at the same level of LP = 252.2 lb./ac.
4. LP means at the same level of N = 229.3 lb./ac.

**Crop :- Paddy (Kharif).**

**Ref :- Or. 58(MAE).**

**Site :- M. A. E. Farm, Kendrapara.**

**Type :- 'M'.**

Object :—Type IV—To study the effect of direct application of phosphate on a legume *vs.* direct effect of N to the succeeding Paddy crop.

**1. BASAL CONDITIONS :**

(i) (a) Nil. (b) and (c) As per treatments. (ii) (a) Recent alluvium. (b) N.A. (iii) 22.8.1958. (iv) (a) Ploughings, cross ploughing and ladderling twice. (b) Transplanted in lines. (c) 480 bundles of seedlings/ac. (d) 9"×6". (e) Nil. (v) Nil. (vi) T—141 (medium). (vii) Irrigated. (viii) Weeding. (ix) N.A. (x) 11.12.1958.

**2. TREATMENTS and 3. DESIGN :**

Same as in expt. no. 57(MAE) on page 51.

**4. GENERAL :**

(i) Normal. (ii) At flowering stage, almost all the plots were subjected to half lodged condition and empty grains were observed. Rats attacked almost all plots. (iii) Grain and straw yield. (v) (a) 1957—contd. (b) No. (c) Nil. (v) (a) and (b) Nil. (vi) Heavy wind and rains. (vii) Nil.

**5. RESULTS :**

(i) 2096 lb./ac. (ii) (a) 241.6 lb./ac. (b) 216.8 lb./ac. (iii) Only N effect is highly significant. (iv) Av. yield of grain in lb./ac.

**Crop :- Paddy (*Kharif*).**

Ref :- Or. 56(MAE).

Site :- M.A.E. Farm, Kendrapara.

Type :- 'M'.

**Object :-**Type VI—To study the effect of different types and levels of phosphate along with different methods of placement.

## 1. BASAL CONDITIONS :

- (i) (a) to (c) N.A. (ii) (a) Recent alluvium. (b) N.A. (iii) 22.8.1956. (iv) (a) N.A. (b) Transplanting. (c)—. (d) and (e) N.A. (v) 5000 lb./ac. of F.Y.M. (vi) T-1242 (late). (vii) Unirrigated. (viii) and (ix) N.A. (x) 29.12.1956.

## 2. TREATMENTS :

All combinations of (1), (2) and (3)

- (1) 3 sources of  $P_2O_5$ :  $S_1$ =Super,  $S_2$ =Dicalcium phosphate and  $S_3$ =Ammo. phos.

- (2) 2 levels of  $P_2O_5$ :  $P_1 = 20$  and  $P_2 = 40$  lb /ac.

- (3) 3 methods of application of  $P_2O_5$ :  $M_1$ =Broadcasting at puddling time,  $M_2$ =dipping the seedlings in mud-slash mixed with the fertilizers before transplanting and  $M_3$ =application in the form of pellets to be placed near the roots at the time of planting.

N equalised by applying A/S to make up 30 lb. ac. of N at planting time.

### 3. DESIGN:

- (i)  $3^2 \times 2$  fact. confd. (ii) (a) 6 plots/block; 3 blocks/replication. (b) N.A. (iii) 4. (iv)  $33' \times 16.5'$ . (b)  $29' \times 15'$ . (v)  $2' \times 9'$ . (vi) Yes.

#### 4. GENERAL:

- (i) Good. (ii) Silver-shoot attack to a negligible extent. (iii) Grain and straw yield. (iv) (a) and (b) No. (c) Nil. (v) (a) Barpalli. (b) Nil. (vi) and (vii) Nil.

## 5. RESULTS :

- (i) 2174 lb./ac. (ii) 150.0 lb./ac. (iii) M effect is highly significant, interaction S×M×P is significant while other effects are not significant. (iv) Av. yield of grain in lb./ac.

	S <sub>1</sub>	S <sub>2</sub>	S <sub>3</sub>	Mean	M <sub>1</sub>	M <sub>2</sub>	M <sub>3</sub>
P <sub>1</sub>	2252	2052	2277	2194	2185	2119	2268

M <sub>2</sub>	2170	2087	2151				
M <sub>3</sub>	2276	2087	2197				

S.E. of marginal mean of S or M	=30.6 lb./ac.
S.E. of marginal mean of P	=25.0 lb./ac.
S.E. of body of table S×P or M×P	=43.3 lb./ac.
S.E. of body of table S×M	=56.8 lb./ac.

**Crop :- Paddy.****Ref :- Or. 56(TCM).****Site :- M.A.E. Farm, Kendrapara.****Type :- 'M'.**

Object :—Type VI (TCM)—To study the direct, residual and cumulative effects of phosphate application to Paddy.

#### 1. BASAL CONDITIONS :

(i) (a) Paddy—Paddy. (b) Paddy. (c) As per treatments. (ii) (a) Recent alluvium. (b) N.A. (iii) 4, 5.8.1956. (iv) (a) N.A. (b) Transplanting. (c)—. (d) and (e) N.A. (v) 5,000 lb./ac. of F.Y.M. (vi) B.A.M.—9 (late). (vii) Unirrigated. (viii) No. (ix) N.A. (x) 17.12.1956.

#### 2. TREATMENTS :

Treatment	1	2	3	4	5	6	7	8	9	10	11	12
First year	0	C	C	p <sub>1</sub>	p <sub>2</sub>	0	0	0	0	p <sub>1</sub> / <sub>2</sub>	p <sub>1</sub>	p <sub>2</sub>
Second year	0	C	C	0	0	p <sub>1</sub>	p <sub>2</sub>	0	0	p <sub>1</sub> / <sub>2</sub>	p <sub>1</sub>	p <sub>2</sub>
Third year.	0	C	C	0	0	0	0	p <sub>1</sub>	p <sub>2</sub>	p <sub>1</sub> / <sub>2</sub>	p <sub>1</sub>	p <sub>2</sub>

Treatments are three-year course rotations with 11 distinct treatments. Plots under one treatment do not receive any fertilizer N or P. Plots under the other ten treatments receive a basal application of N. One of the ten treatments consists of the application of basal dose of N only. This treatment which serves as control is applied to two plots in each block. Various symbols denote : p<sub>1</sub>/<sub>2</sub> = 10 lb./ac., p<sub>1</sub> = 20 lb./ac. and p<sub>2</sub> = 40 lb./ac. of P<sub>2</sub>O<sub>5</sub>.

#### 3. DESIGN :

(i) R.B.D. (ii) (a) 12. (b) N.A. (iii) 4. (iv) (a) 33' × 33'. (b) 27' × 27'. (v) 3' alrcund. (vi) Yes.

#### 4. GENERAL :

(i) Satisfactory. (ii) Rice 'burnt' disease. (iii) Grain and straw yield. (iv) (a) 1953—contd. (b) Yes. (c) N.A. (v) (a) No. (b) Nil. (vi) and (vii) Nil.

#### 5. RESULTS :

(i) 2278 lb./ac. (ii) 252.5 lb./ac. (iii) Treatment differences are highly significant. Control vs. others is also highly significant. (iv) Av. yield of grain in lb./ac.

Treatment	1	2,3	4	5	6	7	8	9	10	11	12
Av. yield	1819	2221	2102	2158	2055	2283	2167	2480	2393	2608	2834

S.E./mean except 2,3=126.3 lb./ac. S.E./mean for 2, 3=89.3 lb./ac.

**Crop :- Paddy.****Ref :- Or. 57(TCM).****Site :- M.A.E. Farm, Kendrapara.****Type :- 'M'.**

Object :—Type VI (TCM)—To study the cumulative, residual and direct effects of phosphate application to Paddy.

#### 1. BASAL CONDITIONS :

(i) (a) Paddy—Paddy. (b) Paddy. (c) As per treatments. (ii) (a) Mahanadi alluvium. (b) N.A. (iii) July—August. (iv) (a) Preliminary and final puddlings. (b) Transplanting. (c) 40 lb./ac. in nursery. (d) 9" × 6". (e) N.A. (v) Nil. (vi) N.A. (vii) Irrigated. (viii) Weeding. (ix) N.A. (x) November—December.

#### 2. TREATMENTS and 3. DESIGN :

Same as in expt. no. 56(TCM) above.

**4. GENERAL :**

(i) Stunted crop growth observed. (ii) Rice grass-hoppers attacked in general and light trap was used to control. Damaged by rats. (iii) Grain yield. (iv) (a) 1953—contd. (b) Yes. (c) Nil. (v) (a) No. (b) Nil. (vi) Drought conditions generally prevailed. (vii) Nil.

**5. RESULTS :**

(i) 3491 lb./ac. (ii) 271.8 lb./ac. (iii) Control vs. others effect is significant. (iv) Av. yield of grain in lb./ac.

Treatment	1	(2, 3)	4	5	6	7	8	9	10	11	12
Av. yield	3293	3433	3514	3540	3483	3536	3495	3528	3540	3465	3633

S.E./mean excluding (2, 3)=135.9 lb./ac. and S.E./mean for (2, 3)=96.1 lb./ac.

npk=20 lb./ac. of N as A/S+20 lb./ac. of P<sub>2</sub>O<sub>5</sub> as Super+20 lb./ac. of K<sub>2</sub>O as Mur. of Potash.

### 3. DESIGN :

(i) and (ii) The district has been divided into four agriculturally homogeneous zones and one field assistant has been posted in each zone. The field assistant conducts the trials in one Revenue circle or thana in the zone and the circle/thana is changed once in two years within the same zone. Each field assistant is required to conduct 31 trials in a year, 8 on a *kharif* cereal, 8 on a *rabi* cereal, 8 on cash crops, 4 on an oil-seed crop and 3 on a leguminous crop. Half the number of trials conducted are of Type A and the other half of Type B on crops other than the legumes. The three trials on legumes are of Type C. Residual effects of phosphate application are studied on Type C trials in two out of the four zones in each district every year. The experiments are laid out in randomly located fields in randomly selected villages in each of the 4 zones at the rate of one experiment per village. (iii) (a) 1/80 ac. (b) 1/40 ac. (iv) Yes.

$n_1'''$  = 20 lb./ac. of N as C.A.N.

$n_2'''$  = 40 lb./ac. of N as C.A.N.

**3. DESIGN :**

(i) and (ii) The district has been divided into four agriculturally homogeneous zones and one field assistant posted in each zone. The field assistant conducts the trials in one revenue circle or thana in the zone and the circle/thana is changed once in two years within the same zone. Each field assistant is required to conduct 31 trials in a year, 8 on *kharif* cereal, 8 on a *rabi* cereal, 8 on cash crop, 4 on an oilseed crop and 3 on a leguminous crop. Half the number of trials conducted are of type A and the other half of type B on crops other than the legumes. The three trials on legumes are of Type C. Residual effects of phosphate application are studied on Type C trials in two out of the four zones in each district every year. The experiments are laid out in randomly located fields in randomly selected villages in each of the 4 zones at the rate of one experiment per village. (iii) (a) 1/80 ac. (b) 1/40 ac. (iv) Yes.

 S.E. of body of table or control mean = 166.88 lb./ac.

**Crop :- Paddy (*Kharif*).****Ref :- Or. 55(TCM).****Centre :- Cuttack (c.f.).****Type :- 'M'.**

Object :—Type X—To study the effect of different doses and sources of N on Paddy yield.

**1. BASAL CONDITIONS :**

- (i) (a) to (c) N.A. (ii) Recent alluvium. (iii) to (v) N.A. (vi) June—July. (vii) Irrigated. (viii) N.A. (ix) N.A. (x) Nov.—Dec.

**2. TREATMENTS :**

All combinations of (1) and (2)+a control (no manure)

- (1) 3 levels of N : N<sub>1</sub>=20, N<sub>2</sub>=40 and N<sub>3</sub>=60 lb./ac.  
 (2) 3 sources of N : S<sub>1</sub>=A/S, S<sub>2</sub>=Nitro chalk and S<sub>3</sub>=Ammonium chloride.

N applied before transplanting.

**3. DESIGN and 4. GENERAL :**

Same as in expt. no. 54(TCM) Type X on page 72 conducted at Cuttack.

**5. RESULTS :**

- (i) 2334 lb./ac. (ii) 189.26 lb./ac. (iii) Only control vs others effect is significant. (iv) Av. yield of grain in lb./ac.

Control=2135 lb./ac.

	N <sub>1</sub>	N <sub>2</sub>	N <sub>3</sub>	Mean
S <sub>1</sub>	2349	2413	2362	2375
S <sub>2</sub>	2426	2299	2337	2354

Mean	2384	2367	2317	2356

S.E. of any marginal mean = 54.64 lb./ac.  
 S.E. of body of table or control mean = 94.63 lb./ac.

**Crop :- Paddy (*Kharif*).****Ref :- Or. 54(TCM).****Centre :- Kalahandi (c.f.).****Type :- 'M'.**

Object :—Type I—To study the effect of different levels and sources of N.

**1. BASAL CONDITIONS :**

- (i) (a) to (c) N.A. (ii) Red loam. (iii) Nil. (iv) and (v) N.A. (vi) July—August. (vii) to (ix) N.A. (x) December.

**2. TREATMENTS :**

0 = Control.  
 $N_1 = 20 \text{ lb./ac. of N as A/S}$ .  
 $N_2 = 40 \text{ lb./ac. of N as A/S}$ .  
 $N_1' = 20 \text{ lb./ac. of N as Urea}$ .  
 $N_2' = 40 \text{ lb./ac. of N as Urea}$ .

**3. DESIGN :**

(i) and (ii) Eleven community project centres, representing the entire paddy growing tract, were selected. From each community project centre, one development block was selected. Villages were selected at random from the selected block and a list of cultivators growing paddy for each selected village was prepared. From these lists two cultivators were selected at random and one field each belonging to them was taken for trial. In each selected field an unreplicated trial was laid out. (iii) N.A. (iv) Yes.

**4. GENERAL :**

(i) Normal. (ii) Nil. (iii) Yield of paddy. (iv) (a) 1953–1955. (b) No. (c) N.A. (v) N.A. (vi) and (vii) Nil.

**Crop :- Paddy(Kharif).****Ref :- Or. 57(25).****Site :- Rice Res. Sub-Stn., Berhampur.****Type :- 'MV'.**

**Object :—To find out the response of segregating pure line cultures of *Japonica*×*Indica* crosses to different doses of N.**

#### 1. BASAL CONDITIONS :

(i) (a) Nil. (b) Paddy. (c) *Dhaincha* as G.M. (ii) (a) Clay loam. (b) N.A. (iii) 26.6.1957/29.7.1957. (iv) (a) 6 ploughings 4" to 6" deep with country plough. Puddling of *dhaincha*. (b) Transplanted. (c) N.A. (d) 9"×6". (e) One seedling/hole. (v) 450 lbs. of organic matter applied on 14.7.1957 to the whole expt. except control plots. (vi) *Japonica*×*Indica* crosses (medium). (vii) Irrigated. (viii) Weeding thrice before flowering and removal of rogues. (ix) 19.5". (x) 2.12.1957.

#### 2. TREATMENTS :

##### Main-plot treatments :

4 levels of N : N<sub>0</sub>=0, N<sub>1</sub>=20, N<sub>2</sub>=40 and N<sub>3</sub>=60 lb./ac.

##### Sub-plot treatments :

42 segregating cultures of *Japonica*×*Indica* crosses.

N applied on 29.7.1957.

#### 3. DESIGN :

(i) Split-plot. (ii) (a) 4 main-plots/block ; 42 sub-plots/main-plot. (b) N.A. (iii) 3. (iv) (a) N.A. (b) 7'×3'. (v) One row along length. (vi) Yes.

#### 4. GENERAL :

(i) Good. (ii) Grass-hopper and stem-borer attack. (iii) Grain yield. (iv) (a) N.A. (b) and (c) Nil. (v) (a) and (b) Nil. (vi) and (vii) Nil.

## 5. RESULTS :

(i) 3230 lb./ac. (ii) (a) 2366 lb./ac. (b) 690 lb./ac. (iii) Main effect of N is significant and effect of V is highly significant. (iv) Av. yield of grain in lb./ac.

### Sub-plot treatments :

All combinations of (1) and (2)

- (1) 3 levels of N as A/S :  $N_0 = 0$ ,  $N_1 = 20$  and  $N_2 = 40$  lb./ac.
- (2) 3 levels of  $P_2O_5$  :  $P_0 = 0$ ,  $P_1 = 20$  and  $P_2 = 40$  lb./ac.

## 3. DESIGN :

(i) Split-plot—confd. (ii) (a) 5 blocks/replication and 9 sub-plots/main-plot. (b) N.A. (iii) 2. (v) (a)  $15' \times 29'$ . (b)  $13\frac{1}{2}' \times 27\frac{1}{2}'$ . (v) One row all round. (vi) Yes.

## 4. GENERAL :

(i) Good. (ii) False smut was found in plots of  $T-812$ ,  $T-1145$  and  $T-58-860$  attacked by caterpillar, gall-fly and grass-hopper. (iii) Tillers, height, grain and straw yield. (iv) (a) 1958—contd. (b) No. (c) Nil. (v) (a) and (b) Nil. (vi) and (vii) Nil.

## 5. RESULTS :

(i) 1983 lb./ac. (ii) (a) 366.1 lb./ac. (b) 210.0 lb./ac. (iii) Main effect of V is confounded with blocks. Main effect of N is significant. (iv) Av. yield of grain in lb./ac.

	$V_1$	$V_2$	$V_3$	$V_4$	$V_5$	Mean	$P_0$	$P_1$	$P_2$
$N_0$	1997	1788	1753	1946	1933	1883	1881	1944	1824
$N_1$	2127	1876	1849	1992	1980	1965	1944	1975	1974
$N_2$	2360	1923	1977	2117	2123	2100	2078	2039	2184
Mean	2161	1862	1860	2018	2012	1983	1968	1986	1954
$P_0$	2107	1920	1931	2007	1875				
$P_1$	2288	1850	1778	1909	2105				
$P_2$	2089	1817	1870	2139	2057				

S.E. of difference of two

1. V marginal means  $= 122.0$  lb./ac.
2. N or P marginal means  $= 54.2$  lb./ac.
3. N or P means at the same level of V  $= 121.2$  lb./ac.
4. V means at the same level of N or P  $= 157.1$  lb./ac.
- S.E. of body of  $N \times P$  table  $= 66.4$  lb./ac.

**Crop :- Paddy (*Kharif*).**

**Ref :- Or. 54(19).**

**Site :- Agri. Res. Stn., Sambalpur.**

**Type :- 'MV'.**

Object :—To study the effect of N and P on different varieties of Paddy.

## 1. BASAL CONDITIONS :

(i) (a) Nil. (b) and (c) N.A. (ii) (a) Clay. (b) N.A. (iii)  $V_1$  and  $V_2 = 8$ , 9.9.1954,  $V_3$  and  $V_4 = 4$ , 5.9.1954. (iv) (a) 6 ploughings with country plough 4" to 6" deep and ladderizing. (b) Transplanted. (c) 20 lb./ac. (d) 9" x 6". (e) 2 seedlings/hole. (v) Nil. (vi) As per treatments. (vii) Unirrigated. (viii) One weeding. (ix) N.A. (x)  $V_1 = 3.1.1955$ ,  $V_2 = 5.1.1955$ ,  $V_3 = 16.12.1954$ ,  $V_4 = 18.12.1954$ .

## 2. TREATMENTS :

### Main-plot treatments :

4 varieties :  $V_1 = T-1242$ ,  $V_2 = \text{Obs}-7$ ,  $V_3 = T-141$  and  $V_4 = T-90$ .

**Sub-plot treatments :**

6 doses of manures :  $M_1=20$  lb./ac. of N + 20 lb./ac. of  $P_2O_5$ ,  $M_2=20$  lb./ac. of N + 40 lb./ac. of  $P_2O_5$ ,  
 $M_3=40$  lb./ac. of N + 20 lb./ac. of  $P_2O_5$ ,  $M_4=40$  lb./ac. of N + 40 lb./ac. of  $P_2O_5$ ,  
 $M_5=40$  lb./ac. of N + 60 lb./ac. of  $P_2O_5$  and  $M_6=60$  lb./ac. of N + 60 lb./ac. of  $P_2O_5$ .

N applied as A/S and  $P_2O_5$  as Super.

**3. DESIGN :**

- (i) Split-plot. (ii) (a) 4 main-plots/block ; 6 sub-plots/main-plot. (b) N.A. (iii) 5. (iv) (a) 13' x 46'.  
(b) 11' x 44'. (v) 1' all round. (vi) Yes.

**4. GENERAL :**

- (i) N.A. (ii) N.A. (iii) Paddy yield. (iv) (a) No. (b) and (c) Nil. (v) (a) and (b) N.A. (vi) Nil. (vii) Expt. planned with 4 replications but data for one replication N.A.

**5. RESULTS :**

- (i) 2147 lb./ac. (ii) (a) 392 lb./ac. (b) 247 lb./ac. (iii) Main effects of M and V are highly significant while interaction MV is significant. (iv) Av. yield of paddy in lb./ac.

	$M_1$	$M_2$	$M_3$	$M_4$	$M_5$	$M_6$	Mean
$V_1$	1837	2224	1935	1987	1852	1991	1971
$V_2$	859	836	686	765	802	787	789

**Crop :- Paddy (*Kharif*).**

**Ref :- Or. 59(24).**

**Site :- Agri. Res. Stn., Bhubaneswar.**

**Type :- 'C'.**

Object :—To study the effect of ploughing with *desi* and iron ploughs at different intervals on the yield of Paddy.

### 1. BASAL CONDITIONS :

- (i) (a) Paddy—Fallow—Paddy. (b) Paddy. (c) 10,000 lb./ac. of F.Y.M. and 30 lb./ac. of N as A/S. (ii) (a) Sandy loam. (b) N.A. (iii) 6.7.1959. (iv) (a) As per treatments. (b) Transplanting. (c) N.A. (d) 9"×9". (e) N.A. (v) 10,000 lb./ac. of F.Y.M. and 40 lb./ac. of N as A/S+25 lb./ac. of  $P_2O_5$  as Super. (vi) T—1242 (late). (viii) Unirrigated. (ix) Weeding. (x) 24.12.1959.

### 2. TREATMENTS :

#### Main-plot treatments :

2 kinds of ploughs :  $P_1$ =Iron and  $P_2$ =*Desi* plough.

#### Sub-plot treatments :

7 ploughings :  $T_1$ =Control,  $T_2$ =Once in every month,  $T_3$ =Once in alternate months,  $T_4$ =Once in every third month,  $T_5$ =Just after previous harvest and before broadcasting,  $T_6$ =Fallow till July, puddling and transplanting and  $T_7$ =Fallow till Aug., puddling and transplanting.

### 3. DESIGN :

- (i) Split-plot (ii) (a) 2 main-plots/replication, 7 sub-plots/main-plot. (b) N.A. (iii) 3. (iv) (a) 24'×18'. (b) 22½'×16½'. (v) One row alround. (vi) Yes.

### 4. GENERAL :

- (i) Good. (ii) Attack of smut; no control measure taken. (iii) Weight of grain and straw. (iv) (a) 1958—contd. (b) Yes. (c) Nil. (v) (a) and (b) Nil. (vi) and (vii) Nil.

### 5. RESULTS :

- (i) 2154 lb./ac. (ii) (a) 301 lb./ac. (b) 408 lb./ac. (iii) None of the effects is significant. (iv) Av. yield of grain in lb./ac.

	$T_1$	$T_2$	$T_3$	$T_4$	$T_5$	$T_6$	$T_7$	Mean
$P_1$	1753	2068	2171	2303	2090	2508	1987	2126

- 3. S means at the same level of V = 93 lb./ac.
- 4. V means at the same level of S = 95 lb./ac.

**Crop :- Paddy (Kharif).**

**Ref :- Or. 59(49).**

**Site :- Agri. Res. Stn., Sambalpur.**

**Type :- 'CV'.**

Object :—To study the effect of methods of planting on different varieties of Paddy.

#### 1. BASAL CONDITIONS :

(i) (a) No. (b) *Sesbania speciosa*. (c) Nil. (ii) (a) Loam. (b) N.A. (iii) 18.5.59 to 26.9.59. (iv) (a) 5 ploughings and 3 ladderings. (b) As per treatments. (c) N.A. (d) 9"×6". (e) N.A. (v) 300 lb./ac. of B.M. applied after 1st ploughing, G.M. with *dhaincha* which was attacked by pest. 10 C.L./ac. of compost was applied and 20 lb./ac. of N as A/S. top dressed, G.L. manuring at 3000 lb./ac. and 30 lb./ac. of N as A/S top-dressed to late crop. (vi) As per treatments. (vii) Irrigated. (viii) 2 hand weedings to early paddy (line sown) and 2 weedings with Japanese weeder to all treatments. (ix) N.A. (x) 26.3.1959 and 12.1.1960

#### 2. TREATMENTS :

##### Main-plot treatments :

2 methods of planting : M<sub>1</sub>=Transplanting and M<sub>2</sub>=Line sowing.

##### Sub-plot treatments :

4 combinations of early and late varieties : V<sub>1</sub>=N—136 (early) and T—90 (late), V<sub>2</sub>=N—36 (early) and GEB—24 (late), V<sub>3</sub>=PTB—10 (early) and T—90 (late) and V<sub>4</sub>=PTB - 10 (early) and GEB—24 (late).

#### 3. DESIGN :

(i) Split-plot. (ii) (a) 2 main-plots/replication ; 4 sub-plots/main-plot. (b) 68'×62'. (iii) 6. (iv) (a) 28'×15'. (b) 25' 10"×14' (M<sub>2</sub> : early paddy), 27'×14½' (M<sub>1</sub> : early and late paddy). (vi) One row on each side. (vi) Yes.

#### 4. GENERAL :

(i) Satisfactory. N—136 lodged slightly before harvesting. (ii) Attack of rice case-worm. Endrine sprayed on 21.10.1959. (iii) Yield of grain, height and no. of effective tillers. (iv) (a) 1957—contd, (modified every year) (b) No. (c) Nil. (v) (a) and (b) No. (vi) Drought conditions in late June and early July. (vi) Nil.

#### 5. RESULTS :

(i) 3327 lb./ac. (ii) (a) 284 lb./ac. (b) 351 lb./ac. (iii) Main effects of M and V alone are highly significant. (iv) Av. yield of grain in lb./ac.

	V <sub>1</sub>	V <sub>2</sub>	V <sub>3</sub>	V <sub>4</sub>	Mean
M <sub>1</sub>	4469	4013	3574	2848	3726
M <sub>2</sub>	4015	3335	2329	2029	2927
Mean	4242	3674	2952	2439	3327

## S.E. of difference of two

1. M marginal means	= 82 lb./ac.
2. V marginal means	= 143 lb./ac.
3. V means at the same level of M	= 203 lb./ac.
4. M means at the same level of V	= 194 lb./ac.

---

**Crop :- Paddy (*Kharif*).****Ref :- Or. 54(1).****Site :- Rice Res. Sub-Stn., Berhampur.****Type :- 'CM'.**

Object :—To test the efficiency of Japanese method of Paddy cultivation.

**1. BASAL CONDITIONS :**

- (i) (a) Nil. (b) Paddy. (c) 40 lb./ac. of N as A/S. (ii) (a) Clay loam. (b) N.A. (iii) Transplanting on 29.7.1954. (iv) (a) N.A. (b) As per treatments. (c) and (d) N.A. (e) 1 seedling/acre. (v) Nil. (vi) T—141. (vii) Irrigated. (viii) Weeding. (ix) 58%. (x) N.A.

**2. TREATMENTS :** $T_1$  = Control (ordinary seed bed, no manure and bulk planting). $T_2$  = Raised seed bed, line planting and no manuring. $T_3$  = Raised seed bed, bulk planting and Japanese method of manuring. $T_4$  = Ordinary seed bed, line planting and Japanese method of manuring. $T_5$  = Raised seed bed, Japanese method of planting and manuring.

Manuring on 28.7.1954 and 20.9.1954.

Raised bed : Two beds of size 4'  $\times$  112'  $\times$  6" manured with 20 baskets of F.Y.M., 1 lb. of A/S and 2 lb. of oil cake.

Seed treatment : The seeds treated with brine solution of 1% concentration and Perenox 2 lb. of seed were sown in each bed of 1/9 ac. Watering was done by soaking. Periodical weeding was done.

Main field : *Dhanicha* was sown to supply about 6000 lb./ac. of G.M. and ploughed in. A day before ploughing, Super at 100 lb./ac. was applied. A/S and oilcake at 50 and 100 lb./ac. respectively were applied before planting.

Care of seedlings : The seedlings were pulled out carefully and transplanted. Another dose of A/S at 100 lb./ac. was applied about 52 days after planting.

Line planting : Spacing 12"  $\times$  9".**3. DESIGN :**

- (i) R.B.D. (ii) (a) 5. (b) N.A. (iii) 5. (iv) (a) 13'  $\times$  46'. (b) 11'  $\times$  44.5'. (v) 12"  $\times$  9". (vi) Yes.

**4. GENERAL :**

- (i) N.A. (ii) N.A. (iii) Weight of grain only. (iv) (a) 1953--contd. (b) No. (c) Nil. (v) (a) and (b) N.A. (vi) and (vii) Nil.

**5. RESULTS :**

- (i) 2166 lb./ac. (ii) 317 lb./ac. (iii) Treatment differences are highly significant. (iv) Av. yield of grain in lb./ac.

Treatment	$T_1$	$T_2$	$T_3$	$T_4$	$T_5$
Av. yield	1750	1348	2939	2240	2553

S.E./mean = 200 lb./ac.

**Crop :- Paddy (*Kharif*).****Ref :- Or. 55(3).****Site :- Rice Res. Sub-Stn., Berhampur.****Type :- 'CM'.**

Object :—To test the efficiency of Japanese method of Paddy cultivation.

**1. BASAL CONDITIONS :**

- (i) (a) Nil. (b) Paddy. (c) N.A. (ii) (a) Clay loam. (b) N.A. (iii) 5.7.1955/2.8.1955. (iv) (a) to (d) As per treatments. (e) 1. (v) N.A. (vi) N.A. (vii) Irrigated. (viii) N.A. (ix) N.A. (x) N.A.

## 2. TREATMENTS :

### Main-plot treatments :

2 methods of manuring :  $M_0$ =No manure and  $M_1$ =Manuring as in Japanese method (G.M. with *dhaincha* at 40 lb./ac. of N during puddling and as top-dressing along with 100 lb./ac. of  $P_2O_5$ ).

### Sub-plot treatments :

2 methods of planting :  $S_1$ =Bulk planting and  $S_2$ =Line planting with 9"×9" spacing and 2 to 3 seedlings/hole. Also weeding and hoeing.

### Sub-sub-plot treatments :

2 seed beds :  $B_1$ =Seedlings from raised seed bed of size 4'×4", thin sowing, manuring and weeding and  $B_2$ =Ordinary seed bed.

## 3. DESIGN :

(i) Split-plot. (ii) (a) 2 main-plots/replication ; 2 sub-plots/main-plot and 2 sub-sub-plots/sub-plot. (b) N.A. (iii) 3. (iv) (a) N.A. (b) 35'×24'. (v) 1½' alround. (vi) Yes.

## 4. GENERAL :

(i) to (iii) N.A. (iv) (a) 1953—1955. (b) No. (c) Nil. (v) (a) and (b) Nil. (vi) and (vii) Nil.

## 5. RESULTS :

(i) 2518 lb./ac. (ii) (a) 216 lb./ac. (b) 207 lb./ac. (c) 157 lb./ac. (iii) Only main effect of P is significant. (iv) Av. yield of grain in lb./ac.

**Object :- To compare Japanese method of Paddy cultivation with local method.**

**1. BASAL CONDITIONS :**

(i) (a) No. (b) and (c) N.A. (ii) (a) Clay. (b) N.A. (iii) 27.8.1954. (iv) (a) to (e) As per treatments. (v) As per treatments. (vi) T—141 (medium). (vii) Unirrigated. (viii) Weeding. (ix) 45.56". (x) 3, 4 and 5.12.1954.

**2. TREATMENTS :**

- Control (5 C.L./ac. of F.Y.M).
- Local method of cultivation+manuring according to the departmental method.
- Local method of cultivation+manuring according to Japanese method.
- Manuring and cultivation according to Japanese method.
- Japanese method of cultivation+manuring as departmental method.

Japanese method of manuring : 15 to 20 C.L./ac. of compost + 100 lb. of A/S + 100 lb. of Super applied at the time of puddling.

**3. DESIGN :**

- (i) R.B.D. (ii) (a) 5. (b) N.A. (iii) 5. (iv) (a)  $22' \times 49\frac{1}{2}'$ . (b)  $22' \times 49\frac{1}{2}'$ . (v) Nil. (vi) Yes.

**4. GENERAL :**

- (i) N.A. (ii) Attack of case-worm on 20.9.1954. Insecticide dusted on 28.9.1954. (iii) Grain yield. (iv) (a) 1954—not contd. (b) No. (c) Nil. (v) (a) and (b) N.A. (vi) and (vii) Nil.

**5. RESULTS :**

- (i) 3054 lb./ac. (ii) 196 lb./ac. (iii) Treatment differences are highly significant. (iv) Av. yield of grain in lb./ac.

Treatment	1	2	3	4	5
Av. yield	2536	3116	3017	3252	3348
S.E./mean	= 87.6 lb./ac.				

**Crop :- Paddy (*Kharif*).**

**Ref :- Or. 56(MAE).**

**Site :- M.A.E. Farm, Kendrapara.**

**Type :- 'CM'.**

Object :—Type VII—To determine the optimum spacing, suitable dates of transplanting and the optimum no. of seedlings per hole, when fertilizers in the form of N and P are applied to Paddy.

**1. BASAL CONDITIONS :**

- (i) (a) to (c) N.A. (ii) (a) Recent alluvium. (b) N.A. (iii) As per treatments. (iv) (a) N.A. (b) Transplanting. (c)—. (d) and (e) As per treatments. (v) 5,000 lb./ac. of F.Y.M. applied at the time of preliminary cultivation. (vi) B.A.M.—9. (vii) Irrigated. (viii) to (x) N.A.

**2. TREATMENTS :****Main-plot treatments :**

All combinations of (1), (2) and (3) (normal date of transplanting)

- (1) 3 transplanting dates :  $D_1=6.8.1956$ ,  $D_2=21.8.1956$  and  $D_3=5.9.1956$ .  
 (2) No. of seedlings/hole :  $R_1=2$ ,  $R_2=4$  and  $R_3=6$  seedlings/hole.  
 (3) 3 spacings :  $S_1=6'' \times 6''$ ,  $S_2=8'' \times 8''$  and  $S_3=10'' \times 10''$ .

**Sub-plot treatments :**

All combinations of (1) and (2)

- (1) 2 levels of N as A/S :  $N_0=0$  and  $N_1=40$  lb./ac.  
 (2) 2 levels of  $P_2O_5$  as Super :  $P_0=0$  and  $P_1=40$  lb./ac.

N applied at the time of planting and  $P_2O_5$  applied at final puddling.

**3. DESIGN :**

- (i) Split-plot. confd. (ii) (a) 27 main-plots in 3 blocks of 9/replication ; 4 sub-plots/main-plot. (b) N.A. (iii) 1. (iv) (a)  $33' \times 16.5'$ . (b)  $29' \times 15'$ . (v) N.A. (vi) Yes.

**4. GENERAL :**

- (i) Good. (ii) N.A. (iii) Grain and straw yield. (iv) (a) 1956—contd. (b) N.A. (c) Nil. (v) (a) and (b) Nil. (vi) and (vii) Nil.

**5. RESULTS :**

- (i) 2399 lb./ac. (ii) (a) 278.7 lb./ac. (b) 188.5 lb./ac. (iii) N.A. (iv) Av. yield of grain in lb./ac.

**Crop :- Wheat (Rabi).**

**Ref :- Or. 58(SFT).**

**Centre :- Bolangir (c.f.).**

**Type :- 'M'.**

Object :—Type A—To study the response of Wheat to different levels of N, P<sub>2</sub>O<sub>5</sub> and K<sub>2</sub>O applied individually and in combinations.

## 1. BASAL CONDITIONS :

- (i) (a) to (c) N.A. (ii) Red soil. (iii) Nil. (iv) N.A. (v) (a) to (e) N.A. (vi) Nov.—Dec. (vii) Irrigated. (viii) N.A. (ix) N.A. (x) April.

## 2. TREATMENTS :

0 = Control (no manure).

n = 20 lb./ac. of N as A/S.

p = 20 lb./ac. of P<sub>2</sub>O<sub>5</sub> as Super.

np = 20 lb./ac. of N as A/S+20 lb./ac. of P<sub>2</sub>O<sub>5</sub> as Super.

k = 20 lb./ac. of K<sub>2</sub>O as Mur. of Potash.

nk = 20 lb./ac. of N as A/S+20 lb./ac. of K<sub>2</sub>O as Mur. of Potash.

pk = 20 lb./ac. of P<sub>2</sub>O<sub>5</sub> as Super+20 lb./ac. of K<sub>2</sub>O as Mur. of Potash.

npk = 20 lb./ac. of N as A/S+20 lb./ac. of P<sub>2</sub>O<sub>5</sub> as Super+20 lb./ac. of K<sub>2</sub>O as Mur. of Potash.

## 3. DESIGN :

(i) and (ii) The district has been divided into four agriculturally homogeneous zones and one field assistant posted in each zone. The field assistant conducts the trials in one Revenue circle or thana in the zone and the circle/thana is changed once in two years within the same zone. Each field assistant is required to conduct 31 trials in a year, 8 on kharif cereal, 8 on a rabi cereal, 8 on cash crops, 4 on an oilseed crop and 3 on a leguminous crop. Half the number of trials conducted are of Type A and the other half of Type B on crops other than the legumes. The three trials on legumes are of Type C. Residual effects of phosphate application are studied on Type C trials in two out of the four zones in each district every year. The above experiments are laid out in randomly located fields in randomly selected villages in each of the 4 zones at the rate of one experiment per village. (iii) (a) N.A. (b) 1/80 ac. (iv) Yes.

**4. GENERAL :**

(i) Good. (ii) Nil. (iii) Grain yield. (iv) (a) 1958—contd. (b) No. (c) Nil. (v) (a) As per design. (b) No. (vi) and (vii) Nil.

**Crop :- Wheat (Rabi).****Ref :- Or. 57(MAE).****Site :- M.A.E. Farm, Barpalli.****Type :- 'IM'.**

Object :—Type I—To study the direct response of nitrogen, phosphate and irrigation on Wheat.

**1. BASAL CONDITIONS :**

- (i) (a) Wheat—Potato—Cotton. (b) Cotton. (c) N.A. (ii) (a) Red loam. (b) N.A. (iii) Oct.- Nov. 1957.  
 (iv) (a) 3 ploughings after rain. (b) N.A. (c) 10 lb./ac. (d) and (e) N.A. (v) 5,000 lb./ac. of F.Y.M.  
 (vi) N.A. (vii) As per treatments. (viii) 3 weedings and 3 hoeings. (ix) and (x) N.A.

**2. TREATMENTS :**

- All combinations of (1), (2), (3) and (4)  
 (1) 3 frequencies of irrigation :  $L_1=3$ ,  $L_2=4$  and  $L_3=5$ .  
 (2) 3 intensities of irrigation :  $I_1=2"$ ,  $I_2=3"$  and  $I_3=4"$  per irrigation.  
 (3) 3 levels of N as A/S :  $N_0=0$ ,  $N_1=30$  and  $N_2=60$  lb./ac.  
 (4) 3 levels of  $P_2O_5$  as Super :  $P_0=0$ ,  $P_1=30$  and  $P_2=60$  lb./ac.  
 Fertilizers applied at the time of sowing by broadcasting.

**3. DESIGN :**

- (i) 3<sup>4</sup> Fact. confd. (ii) (a) 9 plots/block ; 9 blocks/replication. (b) N.A. (iii) 1. (iv) (a) N.A. (b) 1/100 ac. (v) N.A. (vi) Yes.

**4. GENERAL :**

- (i) Satisfactory. (ii) Mild attack of loose smut and rust. (iii) Grain yield. (iv) (a) 1957—contd. (b) and (c) N.A. (v) (a) and (b) Nil. (vi) Nil. (vii) Slight damage by stray cattle.

**5. RESULTS :**

- (i) 653 lb./ac. (ii) 120.0 lb./ac. (iii) Main effect of L is significant , main effect of N is highly significant. Other effects are not significant. (iv) Av. yield of grain in lb./ac.

	$P_0$	$P_1$	$P_2$	$L_1$	$L_2$	$L_3$	$I_1$	$I_2$	$I_3$	Mean

pk = 25 lb./ac. of P<sub>2</sub>O<sub>5</sub> as Super + 50 lb./ac. of K<sub>2</sub>O as Mur. of Potash.

npk = 50 lb./ac. of N as A/S + 25 lb./ac. of P<sub>2</sub>O<sub>5</sub> as Super + 50 lb./ac. of K<sub>2</sub>O as Mur. of Potash.

#### 3. DESIGN :

(i) and (ii) The district has been divided into four agriculturally homogeneous zones and one field assistant has been posted in each zone. The field assistant conducts the trials in one Revenue circle or thana in the zone and the circle/thana is changed once in two years within the same zone. Each field assistant is required to conduct 31 trials in a year, 8 on *kharif* cereal, 8 on *rabi* cereal, 8 on cash crop, 4 on an oilseed crop and 3 on a leguminous crop. Half the number of trials conducted are of Type A and the other half of Type B on crops other than the legumes. The three trials on legumes are of Type C. Residual effects of phosphate application are studied on Type C trials in two out of the four zones in each district every year. The above experiments are laid out in randomly located fields in randomly selected villages in each of the 4 zones at the rate of one experiment per village. (iii) (a) N.A. (b) 1/80 ac. (iv) Yes.

#### 4. GENERAL :

**Crop :- Potato (Rabi).****Ref :- Or. 59(SFT).****Centre :- Balasore (c.f.).****Type :- 'M'.**

Object :—Type B—To investigate the relative efficiency of different nitrogenous fertilizers applied at different levels for Potato.

**1. BASAL CONDITIONS :**

(i) (a) to (c) N.A. (ii) Saline. (iii) to (v) N.A. (vi) Oct.—Nov. (vii) Irrigated. (viii) and (ix) N.A. (x) Feb.—March.

**2. TREATMENTS :**

0 = Control (no manure).

$n_1$  = 50 lb./ac. of N as A/S.

$n_2$  = 100 lb./ac. of N as A/S.

$n_1'$  = 50 lb./ac. of N as Urea.

$n_2'$  = 100 lb./ac. of N as Urea.

$n_1'''$  = 50 lb./ac. of N as C.A.N.

$n_2'''$  = 100 lb./ac. of N as C.A.N.

**3. DESIGN :**

(i), (ii) The district has been divided into four agriculturally homogeneous zones and one field assistant has been posted in each zone. The field assistant conducts the trials in one Revenue circle or thana in the zone and the circle/thana is changed once in two years within the same zone. Each field Assistant is required to conduct 31 trials in a year, 8 on *kharif* cereal, 8 on *rabi* cereal, 8 on cash crop, 3 on oilseed crop and 3 on leguminous crop. Half the number of trials conducted are of type A and the other half of type B on crops other than the legumes. The three trials on legumes are of Type C. Residual effects of phosphate application are studied on Type C trials in two out of the four zones in each district every year. The above experiments are laid out in randomly located fields in randomly selected villages in each of the 4 zones at the rate of one experiment per village. (iii) (a) N.A. (b) 1/80 ac. (iv) Yes.

(d)  $1\frac{1}{2}'$  between rows. (e) N.A. (v) 20 lb./ac. of N as A/S.+20 lb./ac. of N as G.N.C. (vi) Local (late). (vii) Irrigated. (viii) One weeding. (ix) N.A. (x) 15 pickings at intervals of 3 days.

**2. TREATMENTS :**

3 dustings :  $D_0$ =Control,  $D_1$ =Nimagon (0.04%) and  $D_2$ =Diazinon (0.04%).

**3. DESIGN :**

- (i) R.B.D. (ii) (a) 3. (b) N.A. (iii) 5. (iv) (a)  $16' \times 16'$ . (b)  $14' \times 14'$ . (v) 1 row on either side. (vi) Yes.

**4. GENERAL :**

- (i) Good. (ii) Nematode wilt—control measures as per treatments. Phoma-rot fungus—Copper sulphate sprayed. (iii) Percentage plants affected by wilt and yield. (iv) (a) 1959—Nil. (b) Nil. (c) Nil. (v) (a) and (b) Nil. (vi) and (vii) Nil.

**5. RESULTS :**

- (i) 19.01%. (ii) 9.84% (iii) Treatment differences are not significant. (iv) Percentage number of plants affected by wilt.

Treatment	$D_0$	$D_1$	$D_2$
-----------	-------	-------	-------

Mean Percentage	24.24	16.88	15.90
-----------------	-------	-------	-------

S.E./mean = 4.40%

**Crop :- Sweet Potato (Kharif).**

**Ref :- Or. 54(9).**

**Site :- Agri. Res. Stn., Bhubaneswar.**

**Type :- 'M'.**

**Object :-** To study the effect of N, P and K along with bulky organic manures on Sweet Potato.

**1. BASAL CONDITIONS :**

(i) (a) Nil. (b) Sweet Potato. (c) As per treatments. (ii) (a) Sandy loam. (b) N.A. (iii) 27.6.1954 ; 29 to 31.7.1954 ; 1 to 5.8.1954 ; 25 to 27.8.1954 and 11 to 14.9.1954. (iv) (a) 4 ploughings. (b) Planting on ridges. (c) N.A. (d) 3'×1'. (e) N.A. (v) As per treatments. (vi) N.A. (vii) Irrigated. (viii) Earthing levelling and training of vines. (ix) N.A. (x) 24 to 26, 30, 31.12.1954 ; 1 to 4, 8 to 9, 16 to 18, 28 to 31.1.1955 ; 1, 2.2.1955.

**2. TREATMENTS :**

**Main-plot treatments :**

All combinations of (1) and (2)

- (1) 3 levels of N as A/S :  $N_0=0$ ,  $N_1=50$  and  $N_2=100$  lb./ac.
- (2) 3 levels of  $K_2O$  as  $K_2SO_4$  :  $K_0=0$ ,  $K_1=80$  and  $K_2=160$  lb./ac.

**Sub-plot treatments :**

2 levels of  $P_2O_5$  as Super :  $P_0=0$  and  $P_1=80$  lb./ac.

1000 lb./ac. of compost and 2000 lb./ac. of green leaf each was applied to 2 pairs of replications, the third pair was not treated with any manure in basal dressing. Super was applied during 29.7.1954 to 5.8.1954, A/S during 25 to 27.8.1954,  $K_2SO_4$  during 11 to 14.9.1954 and compost and green leaf on 27.6.1954.

**3. DESIGN :**

(i) Split-plot. (ii) (a) 9 main-plots/block ; 2 sub-plots/main-plot. (b) N.A. (iii) 6. (iv) (a) 42'×5'. (b) 40'×9'. (v) 1'×3'. (vi) Yes.

**4. GENERAL :**

(i) N.A. (ii) Sweet potato weevil. (iii) Tuber yield. (iv) (a) 1952—contd. (b) Yes. (c) N.A. (v) (a) and (b) Nil. (vi) Nil. (vii) Replications were treated in pairs with bulky manures and analysis was done accordingly.

**5. RESULTS :**

(i) 3237 lb./ac. (ii) (a) 1556 lb./ac. (b) 1240 lb./ac. (iii) Main effect of organic manures is highly significant. Main effect of P and K are significant. (iv) Av. yield of tuber in lb./ac.

No manure = 2115, green leaf = 4148 and compost = 3448 lb./ac.

	$K_0$	$K_1$	$K_2$	Mean	$P_0$	$P_1$

**Type :- 'C'**

Object :—To study the effect of spacings and method of planting on Sweet Potato.

#### 1. BASAL CONDITIONS :

(i) (a) Nil. (b) and (c) N.A. (ii) (a) Sandy loam. (b) N.A. (iii) 5 to 7.7.1954. Gap-filling on 14.8.1954. (iv) (a) N.A. (b) As per treatments. (c) N.A. (d) As per treatments. (e) N.A. (v) 50 lb./ac. of N as A/S and F.Y.M. were applied. (vi) N.A. (vii) Unirrigated. (viii) Weeding and hoeing. (ix) N.A. (x) 14 to 19.12.1954 and 28 and 29.1.1955.

#### 2. TREATMENTS :

##### Main-plot treatments :

6 combinations of spacing and method of planting : M<sub>1</sub>S<sub>1</sub>=1', M<sub>1</sub>S<sub>2</sub>=2' and M<sub>1</sub>S<sub>3</sub>=3' (spacings between rows with flat beds); M<sub>2</sub>R<sub>1</sub>=2', M<sub>2</sub>R<sub>2</sub>=3' and M<sub>2</sub>R<sub>3</sub>=4' (between ridges with ridge planting).

##### Sub-plot treatments :

3 spacings between plants : D<sub>1</sub>=6", D<sub>2</sub>=9" and D<sub>3</sub>=12".

#### 3. DESIGN :

(i) Split-plot. (ii) (a) 6 main-plots/block ; 3 sub-plots/main-plot. (b) N.A. (iii) 4. (iv) (a) and (b) 42'×12'. (v) One row on either side of the main-plot and 1'6" at either end (D<sub>1</sub> and D<sub>2</sub>) and 2' around (D<sub>3</sub>). (vi) Yes.

#### 4. GENERAL :

(i) N.A. (ii) Sweet potato weevil. (iii) Tuber yield. (iv) (a) 1954—N.A. (b) and (c) No. (v) (a) and (b) Nil. (vi) and (vii) Nil.

#### 5. RESULTS :

(i) 2231 lb.ac. (ii) (a) 1770 lb./ac. (b) 483 lb./ac. (iii) None of the effects is significant. (iv) Av yield of tuber in lb./ac.

	M <sub>1</sub> S <sub>1</sub>	M <sub>1</sub> S <sub>2</sub>	M <sub>1</sub> S <sub>3</sub>	M <sub>2</sub> R <sub>1</sub>	M <sub>2</sub> R <sub>2</sub>	M <sub>2</sub> R <sub>3</sub>	Mean

Object :—To find out the effect of N, P and K with and without compost as basal dressing on Yam.

**1. BASAL CONDITIONS :**

(i) (a) Nil. (b) and (c) N.A. (ii) (a) Sandy loam. (b) N.A. (iii) 21 and 22.6.1954. (iv) (a) Summer ploughing. (b) In pits of 1½' diameter and 1½' depth. (c) N.A. (d) 3'×3'. (e) N.A. (v) As per treatments. (vi) N.A. (vii) Irrigated. (viii) Single stalks were given to individual plots after a fortnight, then pendals were erected. (ix) N.A. (x) 30 and 31.12.1954 to 24.1.1955.

**2. TREATMENTS :**

All combinations of (1), (2) and (3)

- (1) 2 levels of N of A/S :  $N_0=0$  and  $N_1=50$  lb./ac.
- (2) 2 levels of P of Super :  $P_0=0$  and  $P_1=50$  lb./ac.
- (3) 2 levels of K of  $K_2O$  :  $K_0=0$  and  $K_1=80$  lb./ac.

Compost was applied at 4000 lb./ac. in a pair of replications while in the other pairs no compost was given. Super, A/S, and  $K_2O$  were applied on 24.7.1954, 24.8.1954 and 27.8.1954 respectively

**3. DESIGN :**

- (i) Fact. in R.B.D. (ii) (a) 8. (b) N.A. (iii) 4. (iv) (a)  $12' \times 12'$ . (b)  $6' \times 6'$ . (v) 3' alround the net plot. (vi) Yes.

**4. GENERAL :**

- (i) N.A. (ii) N.A. (iii) Tuber yield. (iv) (a) 1954—1956. (b) No. (c) Nil. (v) (a) and (b) Nil. (vi) and (vii) Nil.

**5. RESULTS :**

- (i) 13336 lb./ac. (ii) 401 lb./ac. (iii) Treatment differences are highly significant. Effect of N is highly significant. (iv) Av. yield of yam in lb./ac.

Compost = 14934 lb./ac. and no compost = 11739 lb./ac.

	P <sub>0</sub>	P <sub>1</sub>	Mean	K <sub>0</sub>	K <sub>1</sub>

**Crop :- Biri and Mung (Rabi).****Ref :- Or. 58(40).****Site :- Agri. Res. Stn., Bhubaneswar.****Type :- 'M'.**

Object :—To study the direct application of phosphate on legume and the effect of N to the succeeding cereal crop.

**1. BASAL CONDITIONS :**

- (i) (a) Nil. (b) Paddy. (c) Nil. (ii) (a) Sandy loam. (b) N.A. (iii) 25.12.1958. (iv) (a) 2 ploughings to 4" depth by iron plough followed by levelling. (b) Broadcasting. (c) 15 lb./ac. (d) and (e) Nil. (v) Nil. (vi) Local. (vii) Unirrigated. (viii) Nil. (ix) 3.09". (x) 5.4.1956.

## 2. TREATMENTS :

### Main-plot treatments :

All combinations of (1) and (2)+a fallow.

(1) 2 legumes :  $L_1 = Biri$  and  $L_2 = Mung$ .

(2) 3 levels of phosphate :  $P_0 = 0$ ,  $P_1 = 40$  and  $P_2 = 80$  lb./ac.

### Sub-plot treatments :

3 levels of N as A/S :  $N_0 = 0$ ,  $N_1 = 15$  and  $N_2 = 30$  lb. ac.

The succeeding cereal crop was not grown in the same plot, and so the N-treatments were not applied. Hence the expt. is analysed as R.B.D.

## 3. DESIGN :

(i) Split-plot. (ii) (a) 7 main-plots/block ; 3 sub-plots/main-plot. (b) N.A. (iii) 3. (iv) (a) 20'3" x 21'6". (b) 18'9" x 20'. (v) 9". (vi) Yes.

## 4. GENERAL :

(i) Poor. (ii) N.A. (iii) Yield of grain. (iv) (a) 1956—contd. (b) Yes. (c) Nil. (v) (a) and (b) Nil. (vi) and (vii) Nil.

## 5. RESULTS :

(i) 260.8 lb./ac. (ii) 3.3 lb./ac. (iii)  $L_1$  vs.  $L_2$  effect is highly significant. Other effects are not significant. (iv) Av. yield in lb./ac.

	$P_0$	$P_1$	$P_2$	Mean
$L_1$	614.5	461.2	390.3	488.7
$L_2$	13.9	38.3	46.5	32.1
Mean	314.2	249.7	218.4	260.8

S.E./mean = 1.9 lb./ac.

**Crop :- Mung (*Kharif*).**

**Ref :- Or. 59(SFT).**

**Centre :- Balasore (c.f.).**

**Type :- 'M'.**

Object :— Type C—To compare the response of leguminous crops to alternative sources and levels of phosphate.

## 1. BASAL CONDITIONS .

(i) (a) to (c) N.A. (ii) Saline. (iii) Nil. (iv) and (v) N.A. vi June-July. (vi) to (ix) N.A. (x) September.

## 2. TREATMENTS :

0 = Control (no manure).

$p_1 = 30$  lb./ac. of  $P_2O_5$  as Super.

$p_2 = 60$  lb./ac. of  $P_2O_5$  as Super.

$p_1' = 30$  lb./ac. of  $P_2O_5$  as Dicalcium Phos.

$p_2' = 60$  lb./ac. of  $P_2O_5$  as Dicalcium Phos.

## 3. DESIGN :

The district has been divided into four agriculturally homogeneous zones and one field assistant has been posted in each zone. The field assistant conducts the trials in one revenue circle or thana in the zone and the circle/thana is changed once in two years within the same zone. Each field assistant is required to conduct 31 trials in a year, 8 on *kharif* cereal, 8 on a *rabi* cereal, 8 on each crop, 4 on an oilseed crop and 3 on a leguminous crop. Half the number of trials conducted are of type A and the other half of type B on crops other than the legumes. The three trials on legumes are of Type C. Residual effects of phosphate application are studied on Type C trials in two out of the four zones in each district every year. The above experiments are laid out in randomly located field in randomly selected villages in each of the 4 zones at the rate of one experiment per village.

**4. GENERAL :**

(i) Normal. (ii) N.A. (iii) Grain yield. (iv) (a) 1959—contd. (b) No. (c) N.A. (v) As per design. (vi) and (vii) Nil.

## 4. GENERAL :

(i) to (iii) N.A. (iv) (a) to (c) N.A. (v) (a) and (b) Nil. (vi) and (vii) Nil.

## 5. RESULTS :

(i) 16.32 tons/ac. (ii) 5.08 tons/ac. (iii) Only control vs. others is significant. (iv) Av. yield of sugarcane in tons/ac.

Control = 11.30 tons/ac.

	N <sub>1</sub>	N <sub>2</sub>	N <sub>3</sub>	Mean
S <sub>1</sub>	15.0	18.2	20.7	17.97
S <sub>2</sub>	18.1	17.2	18.4	17.90
S <sub>3</sub>	12.5	17.3	14.5	14.77
Mean	15.20	17.57	17.87	16.88

S.E. of any marginal mean = 1.47 ton/ac.  
 S.E. of body of table or control mean = 2.54 tons/ac.

**Crop :- Sugarcane.****Ref :- Or. 56(10a).****Site :- Agri. Res. Stn., Bhubaneswar.****Type :- 'M'.**

Object :—To study the response of CO-881 variety to high doses of N.

**1. BASAL CONDITIONS :**

(i) (a) Nil. (b) Paddy. (c) N.A. (ii) (a) Laterite (sandy). (b) N.A. (iii) 16.12.1956. (iv) (a) 10 ploughings first with mould board plough and later with country plough. (b) 4000 setts/ac. (c) Flat method. (d) 3' row to row. (e)—. (v) 20 C.L./ac. of F.Y.M. (vi) CO—881 (early). (vii) Irrigated. (viii) Earthing and 3 hoeings by bullock driven hoe. (ix) N.A. (x) 4, 5.12.1957.

**2. TREATMENTS :**

4 doses of N as A/S : N<sub>1</sub>=80, N<sub>2</sub>=160, N<sub>3</sub>=240 and N<sub>4</sub>=320 lb./ac.  
 N applied in split doses of 80 lb./ac. only.

**3. DESIGN :**

(i) R.B.D. (ii) (a) 4. (b) N.A. (iii) 3. (iv) (a) 24'×20'. (b) 20'×18'. (v) 3' border. (vi) Yes.

**4. GENERAL :**

(i) Lodged heavily due to wind on 23.7.1957. (ii) Early shoot-borer. Minimised by earthing and irrigation. (iii) Tiller count, sugarcane yield and analysis of juice. (iv) (a) to (c) No. (v) (a) and (b) Nil. (vi) and (vii) Nil.

**5. RESULTS :**

(i) 36.89 tons/ac. (ii) 3.47 tons/ac. (iii) Treatment differences are not significant. (iv) Av. yield of sugarcane in lb./ac.

Treatment	N <sub>1</sub>	N <sub>2</sub>	N <sub>3</sub>	N <sub>4</sub>
-----------	----------------	----------------	----------------	----------------

Av. yield	33.06	38.19	37.56	38.73
-----------	-------	-------	-------	-------

S.E./mean = 2.00 ton/ac.

**Crop :- Sugarcane.****Ref :- Or. 56 (11a).****Site :- Sugarcane Res. Sub-Stn., Bhubaneswar.****Type :- 'M'.**

Object :—To find out the suitable dose of N for getting the maximum yield of Sugarcane.

**1. BASAL CONDITIONS :**

(i) (a) Nil. (b) and (c) N.A. (ii) (a) Loam. (b) N.A. (iii) 12, 13.10.1956. (iv) (a) Ploughing, levelling and opening up furrows. (b) 17,200, 3-budded setts/ac. (c) Line planting. (d) 3' row to row close planting within lines. (e) Nil. (v) N.A. (vi) CO—421. (vii) Unirrigated. (viii) 6 interculturings, 3 weedings. (ix) N.A. (x) 15.2.1958 to 18.2 1958.

## 2. TREATMENTS :

5 doses of N :  $N_0=0$ ,  $N_1=80$ ,  $N_2=120$ ,  $N_3=160$  and  $N_4=200$  lb./ac.  
N applied as A/S and G.N.C. in the ratio of 1 : 2 on 27.6.1957.

## 3. DESIGN :

(i) L. Sq. (ii) (a) 5. (b) N.A. (iii) 5. (iv) (a) 39'×39'. (b) 33'×33'. (v) 1 row alround. (vi) Yes.

## 4. GENERAL :

(i) Normal. (ii) N.A. (iii) Germination count, tillering count, yield data. (iv) (a) 1956—contd. (b) No. (c) Nil. (v) (a) and (b) Nil. (vi) and (vii) Nil.

## 5. RESULTS :

(i) 21.73 tons/ac. (ii) 1.60 tons/ac. (iii) Treatment differences are not significant. (iv) Av. yield of sugarcane in tons/ac.

Treatment	$N_0$	$N_1$	$N_2$	$N_3$	$N_4$
Av. yield	22.45	22.53	20.89	21.86	20.91

S.E./mean = 0.72 ton/ac.

Object :—To find the effect of lime on yield and quality of Sugarcane.

**1. BASAL CONDITIONS :**

(i) (a) Nil. (b) Sugarcane. (c) As per treatments. (ii) (a) Loam. (b) N.A. (iii) 13.10.1955/ 8 to 16.4.1957, harvest of I crop. (iv) (a) 5 to 10 ploughings with mould board plough. (b) Planting in furrows. (c) N.A. (d) 3' between furrows. (e)—. (v) N.A. (vi) CO.—421. (medium). (vii) Unirrigated. (viii) 2 weedings. (ix) N.A. (x) 28.1.1958 to 29.1.1958.

**2. TREATMENTS and DESIGN :**

Same as in expt. no. 55 (7a) on page 172.

**4. GENERAL :**

(i) Good. (ii) N.A. (iii) Yield of sugarcane. (iv) (a) 1956—contd. (b) Yes. (c) Nil. (v) (a) and (b) Nil. (vi) and (vii) Nil.

**5. RESULTS :**

(i) 5.96 tons./ac. (ii) 2.01 tons/ac. (iii) Treatment differences are not significant. (iv) Av. yield of sugarcane in tons/ac.

Treatment	$L_1$	$L_2$	$L_3$	$L_4$
Av. yield	5.85	7.15	5.20	5.64

S.E./mean = 1.00 tons/ac.

**Crop :- Sugarcane.**

**Ref :- Or. 56 (20a).**

**Site :- Sugarcane Res. Sub-Stn., Rayagada.**

**Type :- 'M'.**

Object :—To find out the effect of application of lime on the yield and quality of Sugarcane.

**1. BASAL CONDITIONS :**

(i) (a) Nil. (b) and (c) N.A. (ii) (a) Loam. (b) N.A. (iii) 22.10.1956. (iv) (a) Ploughing, levelling and opening of furrows. (b) Line planting. (c) 46.3-budded setts/row. (d) 3' from row to row. (e)—. (v) 120 lb./ac. of N as G.N.C. and A/S in the ratio 2 : 1. (vi) CO.—421 (medium). (vii) Unirrigated. (viii) 5 interculturings and 2 weedings. (ix) N.A. (x) 21,22.2.1958.

**2. TREATMENTS**

4 doses of lime as Cal. carbide :  $L_0=0$ ,  $L_1=1/3$ ,  $L_2=2/3$  and  $L_3=1$  ton/acre.

**3. DESIGN :**

(i) L. sq. (ii) (a) 4. (b) N.A. (iii) 4. (iv) (a)  $39' \times 39'$ . (b)  $33' \times 33'$ . (v) 3' allround. (vi) Yes.

**4. GENERAL :**

(i) Below normal. (ii) Eriton 1% applied to setts ; Gammexane at 23.5 lb./ac. (iii) Monthly germination count, tillering counts and yield of cane. (iv) (a) 1956--contd. (b) Nil. (c) Nil. (v) (a) and (b) Nil. (vi) and (vii) Nil.

**5. RESULTS :**

(i) 12.66 tons/acre. (ii) 3.87 tons/acre. (iii) Treatment differences are not significant. (iv) Av. yield of sugarcane in tons/acre.

Treatment	$L_0$	$L_1$	$L_2$	$L_3$
Av. yield	12.26	11.71	14.76	11.88
S.E./mean = 1.93 tons/acre.				—

**Crop :- Sugarcane (*Ratnai*).**

**Ref :- Or. 58(32).**

**Type :- 'M'.**

Object :--To find out the effect of application of lime on the yield and quality of Sugarcane.

**1. BASAL CONDITIONS :**

(i) (a) Nil. (b) and (c) N.A. (ii) (a) Loam. (b) N.A. (iii) 10.10.1957/6.21, 22.2.1958, harvesting of first crop. (iv) (a) Ploughings, levelling and opening up furrows. (b) Line planting. (c) 46, 3-budded sett/row. (d) 3' row to row. (e) —. (v) 120 lb./ac. of N as G.N.C. and A/S in the ratio of 2 : 1 applied on 10.7.1958, by pocket method. (vi) CO--421. (vii) Unirrigated. (viii) 3 weedings and 2 interculturings. (ix) N.A. (x) 2.3.1959.

**2. TREATMENTS and 3. DESIGN:**

Same as in expt. no. 56(20a) on page 173.

**4. GENERAL :**

(i) and (c) N.A. (ii) Tillers, yield of sugarcane. (iv) (a) 1956--N.A. (b) N.A. (c) Nil. (v) (a) and (b) Nil. (vi) and (vii) Nil.

**5. RESULTS :**

(i) 4.745 tons/acre. (ii) 1.69 tons/acre. (iii) Treatment differences are not significant. (iv) Av. yield of grain in tons/acre.

Treatment	$L_0$	$L_1$	$L_2$	$L_3$
Av. yield	3.55	5.35	4.95	5.13
S.E./mean = 0.85 tons/acre.				—

**Crop :- Sugarcane.**

**Ref :- Or. 57(31).**

**Site :- Sugarcane Res. Sub-Stn., Rayagada.**

**Type :- 'M'.**

Object :--To investigate the effect of application of lime on the yield and quality of Sugarcane.

**1. BASAL CONDITIONS :**

(i) (a) Nil. (b) and (c) N.A. (ii) (a) Loam. (b) N.A. (iii) 10.10.1957. (iv) (a) Ploughed twice with wooden plough, levelled and furrows opened with country plough. (b) Line planting. (c) N.A. (d) 3' row to row. (e) —. (v) 120 lb./ac. of N as A/S and G.N.C. in the ratio of 2 : 1 on N basis applied by pocket method on 9.7.1958. (vi) CO--427. (vii) Unirrigated. (viii) 6 weedings and 3 interculturings with country plough. (ix) and (x) N.A.

**2. TREATMENTS and 3. DESIGN :**

Same as in expt. no. 59(20 a) on page 173.

Treatments applied just before final preparation of the land (9.10.1957.) and afterwards field was ploughed twice with wooden plough.

**4. GENERAL :**

(i) and (ii) N.A. (iii) Germination count, tillers and yield. (iv) (a) 1956—N.A. (b) and (c) No. (v) (a) and (b) Nil. (vi) and (vii) Nil.

**5. RESULTS :**

(i) 24.00 tons/ac. (ii) 0.70 tons/ac. (iii) Treatment differences are highly significant. (iv) Av. yield of sugarcane in tons/ac.

Treatment	L <sub>0</sub>	L <sub>1</sub>	L <sub>2</sub>	L <sub>3</sub>
Av. yield	20.79	27.16	25.20	22.84

S.E./mean = 0.35 ton/ac.

Object :— To find out the effect of cutting sugarcane stalks on the yield and growth of Sugarcane.

**1. BASAL CONDITIONS :**

- (i) (a) to (c) N.A. (ii) (a) Loam. (b) N.A. (iii) 24.9.1955 and 28.9.1955. (iv) (a) N.A. b) Planting in furrows. (c) to (e) N.A. (v) N.A. (vi) As per treatments. (vii) Unirrigated. (viii) 3 weedings and 1 interculturing. (ix) N.A. (x) 20.2.1957 to 7.3.1957.

**2. TREATMENTS :**

**Main-plot treatments :**

2 cultural practices :  $C_0$ =No cutting of the stalk and  $C_1$ =Cutting the stalk.

**Sub-plot treatments :**

4 varieties :  $V_1=CO-419$  (late),  $V_2=CO-421$  (medium),  $V_3=CO-449$  (medium) and  $V_4=CO-527$  (early).

**3. DESIGN :**

- (i) Split-plot. (ii) (a) 2 main-plots/replication and 4 sub-plots/main-plot. (b) N.A. (iii) 5. (iv) (a)  $39' \times 39'$ . (b)  $33 \times 33'$ . (v) 3' alround. (vi) Yes.

**4. GENERAL :**

- (i) Good. (ii) N.A. (iii) Raw cane weight and juice analysis. (iv) (a) 1955—contd. (b) and (c) Yes. (v) (a) and (b) Nil. (vi) and (vii) Nil.

**5. RESULTS :**

- (i) 24.6 tons/ac. (ii) (a) 2.09 tons/ac. (b) 2.43 tons/ac. (iii) Only V effect is highly significant. (iv) Av. yield of sugarcane in tons/ac.

	V <sub>1</sub>	V <sub>2</sub>	V <sub>3</sub>	V <sub>4</sub>	Mean
C <sub>0</sub>	25.5	26.8	26.6	22.7	25.4
C <sub>1</sub>	27.3	22.8	23.6	21.7	23.8
Mean	26.4	24.8	25.1	22.2	24.5

S.E. of difference of two

1. C marginal means = 0.66 tons/ac.  
 2. V marginal means = 1.09 tons/ac.  
 3. V means at the same level of C = 1.54 tons/ac.  
 4. C means at the same level of V = 1.49 tons/ac.

**Crop :- Sugarcane (Ratoon).****Ref :- Or. 57(18).****Site :- Sugarcane Res. Sub-Stn., Rayagada.****Type :- 'CV'.**

Object :—To find out the effect of cutting sugarcane stalks on the yield of Sugarcane.

**1. BASAL CONDITIONS :**

- (i) (a) Nil. (b) Sugarcane. (c) N.A. (ii) (a) Loam. (b) N.A. (iii) 24.9.1955/20.2.1957 to 7.3.1957 (date of harvest of first crop). (iv) (a) 10 ploughings with mould board plough. **3. DESIGN :**

(i) and (ii) The district has been divided into four agriculturally homogeneous zones and one field assistant has been posted in each zone. The field assistant conducts the trials in one Revenue circle or thana in the zone and the circle/thana is changed once in two years within the zone. Each field assistant is required to conduct 31 trials in a year 8 on a Kharif cereal, 8 on a cash crop, 4 on an oilseed crop and 3 on a leguminous crop. Half the number of trials conducted are of type A and the other half of type B on crops other than the legumes. The three trials on legumes are of Type C. Residual effects of phosphate application are being studied on Type C trials in two out of the four zones in each district every year. The above experiments will be laid out in randomly selected fields in randomly selected villages in each of the 4 zones at the rate of one experiment per village. (iii) (a) and (b) N.A. (iv) Yes.

**Crop :- Mustard.****Ref :- Or. 59(SFT).****Centre :- Dhenkanal (c.f.).****Type :- 'M'.**

Object :—Type A—To study the response of oilseeds to levels of N, P<sub>2</sub>O<sub>5</sub> and K<sub>2</sub>O, applied individually and in combinations.

**1. BASAL CONDITIONS :**

(i) (a) to (c) N.A. (ii) Red and black. (iii) Nil. (iv) and (v) N.A. (vi) Oct. (vii) to (ix) N.A. (x) Feb.—March.

**2. TREATMENTS :**

0 = Control (no manure).

n = 20 lb./ac. of N as A/S.

p = 20 lb./ac. of P<sub>2</sub>O<sub>5</sub> as Super.

np = 20 lb./ac. of N as A/S + 20 lb./ac. of P<sub>2</sub>O<sub>5</sub> as Super.

k = 20 lb./ac. of K<sub>2</sub>O as Muriate of Potash.

nk = 20 lb./ac. of N as A/S + 20 lb./ac. of K<sub>2</sub>O as muriate of Potash.

pk = 20 lb./ac. of P as Super + 20 lb./ac. of K<sub>2</sub>O as Muriate of Potash.

npk = 20 lb./ac. of N as A/S + 20 lb./ac. of P<sub>2</sub>O<sub>5</sub> as Super + 20 lb./ac. of K<sub>2</sub>O as Muriate of Potash.

**3. DESIGN :**

(i) to (vi) The district has been divided into four agriculturally homogeneous zones and one field assistant has been posted in each zone. The field assistant conducts the trials in one Revenue circle or thana in the zone and the circle/thana is changed once in two years within the same zone. Each field assistant is required to conduct 31 trials in a year, 8 on a *kharif* cereal, 8 on a *rabi* cereal, 8 on cash crop, 4 on an oilseed crop and 3 on a leguminous crop. Half the number of trials conducted are of Type A and the other half of Type B on crops other than the legumes. The three trials on legumes are of Type C. Residual effects of phosphate application are being studied on Type C trials in two out of the four zones in each district every year. The above experiments will be laid out in randomly located fields in randomly selected villages in each of the 4 zones at the rate of one experiment per village.

**4. GENERAL :**

## 5. RESULTS :

(i) 320.4 lb./ac. (ii) 43.9 lb./ac. (iii) No effect is significant. (iv) Av. yield of gingelly in lb./ac.

	$P_0$	$P_1$	$P_2$	Mean	$I_0$	$I_1$	$I_2$
$N_0$	310.6	316.5	310.6	312.6	323.6	287.1	327.1
$N_1$	318.1	340.1	309.2	322.4	294.5	327.1	345.7
$N_2$	360.4	301.9	316.3	326.2	316.3	287.2	375.1
Mean	329.7	319.5	312.1	320.4	311.4	300.5	349.3
$I_0$	301.6	345.7	287.1				
$I_1$	332.8	267.1	301.6				
$I_2$	354.8	345.7	347.5				

S.E. of any marginal mean = 14.63 lb./ac.  
 S.E. of body of any table = 25.34 lb./ac.

**Crop :- Gingelly (Rabi).****Ref :- Or. 59(31).****Site :- Agri. Res. Stn., Bhubaneswar.****Type :- 'IM'.**

Object --To study the effect of different levels of N and  $P_2O_5$  against different levels of irrigation on Gingelly.

#### 1. BASAL CONDITIONS :

- (i) (a) Nil. (b) and (c) N.A. (ii) (a) Sandy loam. (b) N.A. (iii) 12.2.1959. (iv) (a) 2 ploughings by *desi* plough. (b) Broadcasting. (c) N.A. (d) 6" between lines. (e) N.A. (v) Nil. (vi) Local. (vii) As per treatments. (viii) Weeding and gap-filling. (ix) N.A. (x) 25, 26.4.1959.

#### 2. TREATMENTS :

All combinations of (1), (2) and (3)

- (1) 3 levels of N as A/S:  $N_0=0$ ,  $N_1=30$  and  $N_2=60$  lb./ac.
- (2) 3 levels of  $P_2O_5$  as Super :  $P_0=0$ ,  $P_1=25$  and  $P_2=50$  lb./ac.
- (3) 3 levels of irrigation :  $I_1$ =irrigation 3 weeks after germination,  $I_2=I_1$  and one more irrigation 3 weeks afterwards,  $I_3=I_2$  and one irrigation just after flowering.

#### 3. DESIGN :

- (i) 3<sup>3</sup> confd. (ii) (a) 9 plots/block ; 3 blocks/replication. (b) N.A. (iii) 2. (iv) (a) 22'×9'. (b) 21'×8'. (v) 2 lines on either side and 6" across. (vi) Yes.

#### 4. GENERAL :

- (i) and (ii) N.A. (iii) Yield of gingelly. (iv) (a) 1955—contd. (b) No. (c) N.A. (v) (a) and (b) Nil. (vi) and (vii) Nil.

#### 5. RESULTS :

- (i) 349.2 lb./ac. (ii) 150.1 lb./ac. (iii) No effect is significant. (iv) Av. yield of gingelly in lb./ac.

	$P_0$	$P_1$	$P_2$	Mean	$I_1$	$I_2$	$I_3$
$N_0$	274.2	283.4	294.6	284.1	283.0	277.8	271.4
$N_1$	497.0	346.4	370.5	404.6	392.8	404.8	416.4
$N_2$	309.4	350.1	416.8	358.8	332.5	379.3	364.5
Mean	360.4	326.7	360.6	349.2	336.1	360.6	350.8
$I_1$	338.1	346.4	323.7				
$I_2$	326.5	373.3	382.1				
$I_3$	415.9	260.3	376.1				

S.E. of any marginal mean = 50.0 lb./ac.

S.E. of body of any table = 86.6 lb./ac.

**Crop :- Gingelly (Rabi).****Ref :- Or. 59(28).****Site :- Agri. Res. Stn., Bhubaneswar.****Type :- 'IM'.**

Object --To study the effect of different levels of N and  $P_2O_5$  against different levels of irrigation on Gingelly.

#### 1. BASAL CONDITIONS :

- (i) (a) Nil. (b) Gingelly. (c) N.A. (ii) (a) Sandy loam. (b) N.A. (iii) 21.12.1959. (iv) (a) to (e) N.A. (v) F.Y.M. at 10,000 lb./ac. (vi) Local. (vii) As per treatments. (viii) One hoeing with weeding after 1st irrigation. (ix) 1.77". (x) 21.3.1960.

#### 2. TREATMENTS :

Same as in expt. no. 59(31) above.

**3. DESIGN :**

- (i)  $3^3$  partially confd. (ii) (a) 9 plots/blocks ; 3 blocks/replication. (b) N.A. (iii) 2. (iv) (a)  $22' \times 9'$ . (b)  $21' \times 8'$ . (v) One row around. (vi) Yes.

**4. GENERAL :**

- (i) Poor. (ii) Attack of antic diseases. Endrex sprayed. (iii) Height and yield of gingelly. (iv) (a) 1958—contd. (b) and (c) Yes. (v) (a) and (b) Nil. (vi) Yield was low due to antic diseases and heavy rains. (vii) Nil.

**5. RESULTS :**

- (i) 122.8 lb./ac. (ii) 61.95 lb./ac. (iii) No effect is significant. (iv) Av. yield of gingelly in lb./ac.

	P <sub>0</sub>	P <sub>1</sub>	P <sub>2</sub>	Mean	I <sub>1</sub>	I <sub>2</sub>	I <sub>3</sub>

S.E. of any marginal mean = 17 fruit/tree.

S.E. of body of any table = 30 fruit/tree.

Crop :- Nagpur Orange.

Ref :- Or. 55(2).

Site :- Citrus Fruit Res. Stn., Angul.

Type :- 'IM'.

Object :—To find out the effect of different doses of organic manures and methods of irrigation on Nagpur Orange.

## 1. BASAL CONDITIONS :

- (i) Fallow. (ii) (a) Black cotton (b) N.A. (iii) Budding. (iv) Nagpur *santra* on *kharna khatta*. (v) June, 1950 at a spacing of 20' both ways. (vi) One year. (vii) *Dhaincha* as G.M. at 30 lb./ac. (viii) 3 ploughings. (ix) Nil. (x) Irrigated. (xi) and (xii) N.A.

## 2. TREATMENTS :

## Main-plot treatments :

4 levels of N : N<sub>0</sub>=0, N<sub>1</sub>=40, N<sub>2</sub>=60 and N<sub>3</sub>=80 lb./ac.

## Sub-plot treatments :

2 methods of irrigation : M<sub>1</sub>=Ring irrigation and M<sub>2</sub>=Furrow irrigation.

## 3. DESIGN :

- (i) Split-plot. (ii) (a) 4 main-plots/block ; 2 sub-plots/main-plot. (b) N.A. (iii) 4. (iv) 3. (v) One tree around the plot. (vi) Yes.

**4. GENERAL :**

- (i) Good. (ii) N.A. (iii) Diameter and height of stalk and scion and fruit yield. (iv) (a) 1952—contd.  
 (b) Nil. (v) N.A. (vi) and (vii) Nil.

**5. RESULTS :**

- (i) 195 fruit/tree. (ii) (a) 120 fruit/tree. (b) 139 fruit/tree. (iii) Only N effect is highly significant.  
 (iv) Av. no. of fruit/tree.

	N <sub>0</sub>	N <sub>1</sub>	N <sub>2</sub>	N <sub>3</sub>	Mean
M <sub>1</sub>	84	113	290	347	209
M <sub>2</sub>	62	180	204	275	180
Mean	73	147	247	311	195

S.E. of difference of two

1. N marginal means = 60 fruit/tree.  
 2. M marginal means = 49 fruit/tree.  
 3. M means at the same level of N = 98 fruit/tree.  
 4. N means at the same level of M = 92 fruit/tree.

**Crop :- Nagpur Orange.**

**Ref :- Or. 57(1).**

**Site :- Citrus Fruit Res. Stn., Angul.**

**Type :- 'IM'.**

**Object :-** To find out the effect of different doses of organic manures and methods of irrigation on Nagpur Orange.

**1. BASAL CONDITIONS :**

- (i) Fallow. (ii) (a) Clay soil (b) N.A. (iii) Budding. (iv) Nagpur orange (medium). (v) June 1950 ; at a spacing of 20' both sides. (vi) 1½ years. (vii) Nil. (viii) Green manured with 15 srs. of *dhainch* seed and turning it under soil before maturity. (ix) Nil. (x) Irrigated. (xi) 8.95". (xii) N.A.

**2. TREATMENTS and DESIGN :**

Same as in expt. no. 55 (2) on page 211.

**4. GENERAL :**

- (i) Normal. (ii) Nil. (iii) Diameter of stock, diameter of scion, circumference of spread, height of plants and yield of fruit. (iv) (a) 1952—contd. (b) Nil. (v) and (vi) Date for 1955 N.A.

**5. RESULTS :**

- (i) 88 fruit/tree. (ii) (a) 104 fruit/tree. (b) 36 fruit/tree. (iii) Only M effect is highly significant. (iv) Av. no. of fruit/tree.

	N <sub>0</sub>	N <sub>1</sub>	N <sub>2</sub>	N <sub>3</sub>	Mean
M <sub>1</sub>	64	54	67	55	60
M <sub>2</sub>	132	96	113	123	116
Mean	98	75	90	89	88

S.E. of difference of two

1. N marginal means = 52 fruit/tree.  
 2. M marginal means = 13 fruit/tree.  
 3. M means at the same level of N = 25 fruit/tree.  
 4. N means at the same level of M = 56 fruit/tree.
